Q1. Which of the following is a compiler?

(A) Card
(B) Hardware
(C) Software
(D) Neither hardware nor software

Solution: The correct answer is option C. A compiler is a type of software. It is a program that translates source code written in a high-level programming language (such as C, C++, Java) into machine code or executable code that can run on a computer's hardware. The compilation process involves converting human-readable code into a format the computer's processor can understand and execute. This makes compilers an essential tool in the software development process.

Q2. .... is a software which is used to do a particular task.

(A) Operating system
(B) Program
(C) Data software
(D) Application software

Solution: (d) Application software is the software that allows you to perform specific tasks such as writing a term paper, surfing the web, keeping a home budget, and creating slides for a presentation. for e.g.MS Office ,MS Powerpoint etc. Operating system → An operating system (OS) is system software that manages computer hardware, software resources, and provides common services for computer programs for e.g. linux, android.

Q3. The primary purpose of an operating system is

(A) To let people use the computer
(B) To keep system programmers employed
(C) To make the most efficient use of computer hardware
(D) To make using the computer easier

Solution: The correct answer is option C. An Operating System (OS) is a fundamental software component that acts as an intermediary between the computer hardware and software applications running on the computer. It provides users with a user-friendly interface for interacting with the computer and manages the system's various hardware and software resources. Examples of popular operating systems include Microsoft Windows, macOS (formerly OS X), Linux and Unix. The operating system plays an important role in providing an environment where software applications can run efficiently and where users can interact effectively with their computer.

Q4. In which of the following modes of data transmission can data flow in both directions simultaneously?

(A) Simplex
(B) Half-duplex
(C) Full-duplex
(D) Quarter-duplex

Solution: The correct answer is: (c) Full-duplex. Explanation: Full Duplex: in this mode, data can flow in both directions simultaneously. For example, during a phone call, both parties can speak and listen at the same time. Other options: Simplex — data flows in only one direction. For example, a keyboard sends data to a computer. Half Duplex — data can flow in both directions, but not at the same time. For example, a walkie-talkie, where one person has to finish speaking before the other can respond. Quarter Duplex — this term isn't commonly used in data transmission; it could refer to a system where data can flow in both directions, but in small, non-simultaneous segments, but it isn't a standard classification.

Q5. The valid format of MS Excel is __________.

(A) .jpeg
(B) .png
(C) .doc
(D) .xls

Solution: (d) The Microsoft Excel Binary File format, with the . xls extension and referred to as XLS or MS-XLS, was the default format used for spreadsheets in Excel through Microsoft Office 2003. .jpeg → JPEG stands for "Joint Photographic Experts Group". It's a standard image format for containing lossy and compressed image data. .png → PNG is short for Portable Network Graphic, a type of raster image file. It's a particularly popular file type with web designers because it can handle graphics with transparent or semi-transparent backgrounds. .doc → DOC file extension refers to a word processing document format. This binary file format is proprietary of Microsoft and is native to Microsoft's most popular word processing application, Microsoft Word.

Q6. _________ serves as the bridge between raw hardware and programming layer of a computer system.

(A) Low level language
(B) Medium level language
(C) High level language
(D) Both 'a' and 'b'

Solution: (b) Medium-level language (MLL) is a computer programming language that interacts with the abstraction layer of a computer system. Medium-level language serves as the bridge between the raw hardware and programming layer of a computer system.e.g. C language. Low-level languages are languages that sit close to the computer's instruction set . An instruction set is the set of instructions that the processor understands. Two types of low-level language are for e.g. machine code,assembly language. High level languages is one that is user-oriented in that it has been designed to make it straightforward for a programmer to convert an algorithm into program code.for e.g. C, COBOL, FORTRAN.

Q7. (25)10 can be written in binary as:

(A) 11101
(B) 11011
(C) 11001
(D) 10110

Solution: The correct answer is option C.

Q8. In a web address, the domain indicator '.com' stands for:

(A) computer
(B) communication
(C) common
(D) commercial

Solution: (d) In a web address, the domain indicator '.com' stands for commercial.

Q9. To undo the last work, we have to use which of the following Windows shortcut keys?

(A) Ctrl + P
(B) Ctrl + U
(C) Ctrl + A
(D) Ctrl + Z

Solution: (d) To undo the last action press Ctrl + Z. To print the document press Ctrl + P. To underline the document press Ctrl + U. Ctrl + A used to select the entire text.

Q10. Name an operating System that provides an interface between the computer user and the hardware.

(A) Ms-Dos
(B) Graphical User interface
(C) Character User interface
(D) User interface

Solution: (d) User interface → The user interface (UI) is the point of human-computer interaction and communication in a device. Character User interface → Character user interface refers to the use of text commands, managed by a command-line interpreter, in order to communicate with a computer program.Graphical User interface → It is a visual way of interacting with a computer using items such as windows, icons, and menus, used by most modern operating systems.Ms-Dos → The MS-DOS operating system is a command-driven interface, single-tasking operating system.

Q11. Conversion of decimal number (93)10 to hexadecimal number is

(A) (2D)16
(B) (62)16
(C) (31)16
(D) (5D)16

Solution: (d) Step 1: Divide (93)10 successively by 16 until the quotient is 0: 93/16 = 5, remainder is 13 5/16 = 0, remainder is 5 Step 2: Read from the bottom (MSB) to top (LSB) as 5D. So, 5D is the hexadecimal equivalent of decimal number 93 (Answer).

Q12. Which of the following functions in MS-Excel counts the number of cells within a range that meet the given condition?

(A) COUNTA
(B) COUNTIFB
(C) COUNT
(D) COUNTIF

Solution: (d) COUNTIF is an Excel function to count cells in a range that meet a single condition. The COUNTA function is used to count only the cells which have data. The Excel COUNT function returns a count of values that are numbers.

Q13. Which of the following appears at the extreme right position of a worksheet in MS Excel?

(A) Vertical scroll bar
(B) Menu bar
(C) Status bar
(D) Horizontal scroll bar

Solution: (a) Vertical scroll bar appears at the extreme right position of a worksheet in MS Excel.

Q14. Which constraint is used for validation purposes?

(A) CHECK
(B) Unique
(C) Not null
(D) Primary key

Solution: (a) In SQL CHECK constraint check specified specific condition, which must evaluate to true for constraint to be satisfied.Unique → The UNIQUE constraint ensures that all values in a column are different. Both the UNIQUE and PRIMARY KEY constraints provide a guarantee for uniqueness for a column or set of columns.Not null → The NOT NULL constraint enforces a column to NOT accept NULL values. Primary key → The PRIMARY KEY constraint uniquely identifies each record in a table. Primary keys must contain UNIQUE values, and cannot contain NULL values.

Q15. Which of the following was the world's first electronic programmable computing device?

(A) EDVAC
(B) ENIAC
(C) PC
(D) Colossus

Solution: (d) Colossus was the world's first electronic digital programmable computer. It used a large number of valves (vacuum tubes) It had paper-tape input and was capable of being configured to perform a variety of Boolean logical operations on its data, but it was not Turing-complete.ENIAC,(Electronic Numerical Integrator and Computer), it was the first programmable general-purpose electronic digital computer.EDVAC → EDVAC (Electronic Discrete Variable Automatic Computer) was one of the earliest electronic computers.

Q16. The advantage of LAN is__________

(A) sharing peripherals
(B) backing up your data
(C) saving all your data
(D) accessing the Web

Solution: (a) Local Area Network (LAN) can be defined as a collection of computers and peripherals interconnected within a limited geographical area.

Q17. Expand RAID________ .

(A) Reproduce Array of Intelligent Disks
(B) Reproduce Array of Inexpensive Disks
(C) Redundant Array of Inexpensive Drives
(D) Redundant Array of Independent Disks

Solution: (d) RAID (redundant array of independent disks) is a way of storing the same data in different places on multiple hard disks or solid-state drives (SSDs) to protect data in the case of a drive failure.

Q18. The application layer is the ________ layer of the OSI model.

(A) 1
(B) 3
(C) 4
(D) 7

Solution: The correct answer is option D. The image below shows the various layers of the OSI model and their functions.

Q19. Which of the following generally does NOT belong to the address field while composing an email message?

(A) OCC
(B) CC
(C) To
(D) From

Solution: (a) Cc stands for carbon copy which means that whose address appears after the Cc: header would receive a copy of the message. Toâ�� field is reserved for the main recipients of your email.

Q20. A table in MS-Word 2010 can have unlimited rows and a maximum of ______ columns.

(A) 62
(B) 61
(C) 64
(D) 63

Solution: (d) A Word table can contain as many as 63 columns but the number of rows is unlimited.

Q21. The NOR gate output will be high if the two inputs are________.

(A) 01
(B) 00
(C) 10
(D) 11

Solution: (b) It is an inverse of an OR gate. This gate is designed by combining the OR and NOT gates. It returns True only if both the conditions or inputs are False otherwise it returns False. Truth Table of NOR Gate A B X 0 0 1 0 1 0 1 0 0 1 1 0

Q22. The name for the way that computers manipulate data into information is called _____.

(A) Storage
(B) Program
(C) Processing
(D) Compiler

Solution: (c) Data processing is manipulation of data by a computer.

It includes the conversion of raw data to machine-readable form, flow of data through the CPU and memory to output devices, and formatting or transformation of output. Compiler→A compiler is a special program that translates a programming language's source code into machine code, bytecode or another programming language.

Q23. The user interface is the part of ______ that lets the user enter and receive information.

(A) Computer network
(B) Operating system
(C) Computer hardware
(D) Data science

Solution: The correct answer is b: Operating system. Computer network: overview — a computer network is a system of interconnected devices that communicate with each other to share resources, data and applications. This can include local area networks (LAN), wide area networks (WAN), and the internet. Function — networks enable communication between various computers and devices, letting them share files, printers and other resources. They're essential for tasks like emailing, accessing websites, and streaming media. Operating system: overview — an operating system (OS) is software that manages a computer's hardware and software resources. It acts as an intermediary between the user and the computer's hardware. Function — the operating system provides essential services such as managing files, running applications, and controlling peripheral devices. It also includes a user interface, which could be a graphical user interface (GUI) or command-line interface (CLI), letting users interact with the computer system. Main role — the operating system's user interface is important for performing tasks like launching applications, accessing files, and configuring system settings. Computer hardware: overview — computer hardware includes all the physical components of a computer system, such as the CPU, memory, hard drive, monitor, keyboard and printer. Function — hardware components perform the actual computation, data storage, and input/output tasks necessary for the computer to work. They're the tangible parts of the computer system. Data science: overview — data science is an interdisciplinary field that focuses on extracting knowledge and insights from data through the use of statistical methods, algorithms and machine learning. Function — data scientists analyse large datasets to uncover patterns, make predictions, and assist in decision-making. Tools and software used in data science often include user interfaces to facilitate data analysis and visualization.

Q24. The First Supercomputer of the World is_____ .

(A) PARAM
(B) Siddhart
(C) IBM -370
(D) CRAY-1

Solution: (c) The IBM System/370 Model 195 was announced Jun 30, 1970 and, at that time, it was "IBM's most powerful computing system." Its introduction came about 14 months after the announcement of the 360/195. Siddharth→Siddhartha was the first computer developed in India. It was manufactured by the Electronics Corporation of India. PARAM→PARAM is a series of supercomputers designed and assembled by the Centre for Development of Advanced Computing (C-DAC). CRAY-1→Featuring a central column surrounded by a padded, circular seat, the Cray-1 looked like no other computer. And performed like no other computer. It reigned as the world's fastest from 1976 to 1982.

Q25. MSD refers as_________

(A) Many Significant Digit
(B) Multiple Significant Digit
(C) Most Significant Decimal
(D) Most Significant Digit

Solution: (d) In binary number MSD refers to (Most Significant Digit).
