Q1. A mistake in an algorithm that causes incorrect results is called a ?

- (A) Logical error
- (B) Syntax error
- (C) Procedural error
- (D) Compiler error

Solution: (a) Logic errors occur when there is a fault in the logic or structure of the problem. Logic errors do not usually cause a program to crash. However, logic errors can cause a program to produce unexpected results. Syntax error → A syntax error in computer science is an error in the syntax of a coding or programming language, entered by a programmer. Procedural error → Procedural error occurs when different procedures are used to answer the same question and provide slightly different answers. Compiler error → Compilation error refers to a state when a compiler fails to compile a piece of computer program source code, either due to errors in the code, or, more unusually, due to errors in the compiler itself.

Q2. In Microsoft PowerPoint, the best way to insert a new slide into a presentation is to use _____.

- (A) Normal view
- (B) Special view
- (C) Slide show view
- (D) Slide sorter view

Solution: The correct answer is option D. Slide Sorter view is helpful when you want to quickly rearrange, add or delete slides in your presentation. It provides a visual representation of your slides, making it easier to manage the sequence and layout of your presentation.

Q3. The most common method of entering text and numerical data into a computer system is through the use of a _____.

- (A) plotter
- (B) scanner
- (C) printer
- (D) keyboard

Solution: (d) Keyboard is used to enter data or information in a computer system, which may be in numeric or alphabetic form. Plotter → It is an output device that uses a pen, pencil, marker or other writing tools for making vector graphics. Scanner → It is an optical input device. It is used to convert the data and image on paper into the digital form. Printer → A printer prints information and data from the computer onto a paper. It can print documents in color as well as in black and white.

Q4. _____ function in MS-Excel 2010 capitalizes the first letter in each word of a text value.

- (A) LEN
- (B) UPPER
- (C) LOWER
- (D) PROPER

Solution: (d) Proper function → It capitalizes the first letter in a text string and any other letters in text that follow any character other than a letter. Use the formula =UPPER(A1) for all UPPERCASE; =LOWER(A1) for all lowercase. LEN function → It is used to calculate the length of a text in an Excel cell.

Q5. _____ is used when you want a cell reference to stay fixed on specific cell in MS- Excel 2010.

- (A) Specific cell reference
- (B) Mixed cell reference
- (C) Absolute cell reference
- (D) Automatic cell reference

Solution: (c) Absolute references are used when you want to fix a cell location. An absolute reference in Excel is a reference that cannot be changed when copied. These cell references are preceded by a dollar sign. Mixed cell reference → Mixed Reference is a type of Absolute reference in which either the column is made constant or the row is made constant.

Q6. Firewall is used in communication network systems to save _____.

- (A) Unauthorized attack
- (B) Virus attack
- (C) Data driven attack
- (D) Fire attack

Solution: (a) Firewalls provide protection against outside cyber attackers by shielding your computer or network from malicious or unnecessary network traffic. Firewalls can also prevent malicious software from accessing a computer or network via the internet.

Q7. 4 Each page in the Microsoft powerpoint are named as _____.

- (A) Document
- (B) Page
- (C) Sheet
- (D) Slide

Solution: (d) Each page in powerpoint is named as slide

Q8. Cracked softwares are another source of _____.

- (A) Email attack
- (B) Trojan horse
- (C) Virus attack
- (D) All of these

Solution: (c) Software cracking refers to the modification of a software to remove unwanted features or unlock more features like copy protection features. Software cracking is considered an illegal activity as it leads to copyright infringement. Email attack → It is known as phishing, it occurs when a malicious party sends a fraudulent email disguised as being from an authorized, trusted source. Trojan horse → A Trojan, or Trojan horse, is a type of malware that conceals its true content to fool a user into thinking it's a harmless file.

Q9. In MS Word, the function key F12 is used to _____.

- (A) Open the Save As dialog box.
- (B) Open the File menu.
- (C) Open the next working window.
- (D) Close the working window.

Solution: The correct answer is (a). Pressing the F12 key in MS Word opens the Save As dialog box. F12: this function key is a shortcut to quickly open the Save As dialog box, letting you save the current document under a different name or in a different location. Open File menu: this action is typically done by pressing Alt+F. Open next working window: this can be done by switching between open windows using Alt+Tab. Close working window: this can be done using Ctrl+W or Alt+F4. So, the correct answer is that pressing F12 will open the Save As dialog box.

Q10. Which of the following statements is/are FALSE? (i) In MS-Word, different letters of a word cannot be of different font-colors. (ii) In MS-Word, the Show/Hide command button can be used to display paragraph marks in a document.

- (A) Neither (i) nor (ii)
- (B) Only (ii)
- (C) Both (i) and (ii)
- (D) Only (i)

Solution: (d) (i) In MS-Word - With the help of the font color button, different letters of a word can be managed with different font colors. (ii) In MS-Word - The Show/Hide command button can be used to display paragraph marks in a document.

Q11. What is the function of 'Archive' in email?

- (A) It hides the message from the inbox and moves it to the outbox folder
- (B) It removes the message from the inbox and moves it to the important messages folder
- (C) It removes the message from the inbox and deletes it
- (D) It removes the message from the inbox, without deleting it**

Solution: The correct answer is option D. If you archive a message, the message is removed from the inbox and saved in the Archive folder without being deleted.

Q12. _____ is a sequence of instructions designed to direct the computer to perform certain functions.

- (A) Subroutines
- (B) Software**
- (C) Program
- (D) Data

Solution: (b) Software is a sequence of instructions designed to direct the computer to perform certain functions.

Q13. Which of the following is NOT a search engine?

- (A) Yahoo
- (B) Bing
- (C) Safari**
- (D) Ask

Solution: (c) Examples of Search Engines - Best Search Engines in the World: Google, Bing, Baidu, Yahoo, Yandex, Ask, DuckDuckGo, Naver.

Q14. Which of the following is NOT allowed in an email-id?

- (A) Numeric digits
- (B) Blank space**
- (C) Capital letters
- (D) Dot (.)

Solution: (b) Blank space is not allowed in email id. The example of an E-mail address is pinnacle@gmail.com. The format of the E-mail address is username@hostname or domain name.

Q15. _____ is used for the maintenance and configuration of a computer system.

- (A) Operating system
- (B) Application software
- (C) Utility program**
- (D) Device driver

Solution: The correct answer is option C. Operating Systems (OS) are software that manage computer hardware and software resources and provide various services for computer programs. Although they play an important role in managing the computer's overall operation, including task scheduling and memory management, they are not specifically focused on maintenance and configuration tasks. Application software refers to programs designed for specific tasks or applications, such as word processors, spreadsheets or graphic design tools. While these programs are essential for various tasks, they are not primarily used for the maintenance and configuration of a computer system. Utility programs are specifically designed to perform maintenance and configuration tasks on a computer system. These programs assist with tasks such as disk management, data backup, system optimization, troubleshooting and much more. Examples include disk defragmenter, antivirus software, system diagnostic tools and backup utilities. Device drivers are software components that let the operating system communicate with and control hardware devices such as printers, graphics cards and input devices.

Q16. Binary numbers consist of ____ .

- (A) 0s and 1s**
- (B) All the alphabets
- (C) Any two digit numbers
- (D) All two letter

Solution: (a) Binary describes a numbering scheme in which there are only two possible values for each digit 0 or 1 and is the basis for all binary code used in computing systems.

Q17. Which of the following is not related to utility software?

- (A) Antivirus program
- (B) Text editor
- (C) Railway reservation system**
- (D) Disk compression software

Solution: (c) Railway reservation system is an example of specific purpose software which is designed to perform specific tasks.

Q18. In order for a peripheral to operate correctly, it must be installed.

- (A) user interface
- (B) internet connection
- (C) operating system
- (D) device driver**

Solution: (d) In order to work with peripheral equipment, the installation of hardware drivers is mandatory. A driver provides hardware devices with a software interface, enabling operating systems and other computer programs to access all the hardware functions.

Q19. The internet service that provides a multimedia interface to available resources is called _____.

- (A) FTP
- (B) Telnet
- (C) NOTA
- (D) World Wide web**

Solution: (d) The World Wide Web (WWW), commonly known as the Web, is an information system enabling documents and other web resources to be accessed over the Internet. FTP (File Transfer Protocol) is a network protocol for transmitting files between computers over Transmission Control Protocol/Internet Protocol (TCP/IP) connections. Telnet is a network protocol used to virtually access a computer and to provide a two-way, collaborative and text-based communication channel between two machines.

Q20. Where does the header appear?

- (A) Bottom
- (B) Center
- (C) Top**
- (D) All of these

Solution: (c) Headers are located in the margin area at the top of the page. Footers are located in the margin area at the bottom of a page. Headers and footers generally contain document information, such as the file name, author, date created, page numbering and the like.

Q21. Which of the following is NOT a video file extension?

- (A) .avi
- (B) .mov
- (C) .jpeg**
- (D) .mp4

Solution: The correct answer is (c) .jpeg. .avi, .mov and .mp4 are all common video file formats used to store video and audio data. .jpeg is an image file format, not a video file format — so it is the odd one out.

Q22. Which of the following is a non-volatile memory?

- (A) RAM
- (B) ROM**

- (C) Cache
- (D) Primary

Solution: (b) The volatile memory stores data and computer programs that the CPU may need in real-time, and it erases them once a user switches off the computer. Cache memory and RAM are types of Volatile memory. Read-only memory is a non-volatile storage solution. This is because you cannot erase or modify it when the computer system is turned off.

Q23. Which of the following is NOT a valid file format in MS-PowerPoint?

- (A) .pptx
- (B) .pptm
- (C) .ppt
- (D) .ppwt**

Solution: The correct answer is option D. The following are file formats in MS PowerPoint.

Q24. What is the official name of JavaScript?

- (A) ECMAScript**
- (B) LiveScript
- (C) JavaScript
- (D) WireScript

Solution: The correct answer is (a) ECMAScript. Explanation: ECMAScript is a standard developed by the ECMA International organization for scripting languages. JavaScript is an implementation of this standard. The purpose of ECMAScript was to create a standard for scripting languages, and JavaScript is its most well-known implementation. JavaScript's official name is ECMAScript, which exists as a general technical standard. Other options explained: LiveScript — LiveScript was the original name of JavaScript, which was later changed to JavaScript. The name was changed to increase market appeal and associate it with the Java programming language, although these are two different languages. JavaScript — JavaScript is a popular scripting language, but its official name is ECMAScript. JavaScript is an implementation of the ECMAScript standard, used to add interactivity and dynamism to web pages. WireScript — WireScript is not a recognized name and is unrelated to any well-known scripting language.

Q25. Convert the decimal number 101 to binary.

- (A) 1100101**
- (B) 1100111
- (C) 1101001
- (D) 1101011

Solution: The correct answer is: a. Explanation: let's convert the decimal number 101 to binary: 1. Divide the decimal number by 2 and note the remainder: $(101/2 = 50)$ remainder 1 (rightmost digit). 2. Divide the quotient (50) by 2 again: $(50/2 = 25)$ remainder 0. 3. Repeat the process: $(25/2 = 12)$ remainder 1, $(12/2 = 6)$ remainder 0, $(6/2 = 3)$ remainder 0, $(3/2 = 1)$ remainder 1, $(1/2 = 0)$ remainder 1 (leftmost digit). Now read the remainders from bottom to top: 1100101. So, the binary form of decimal number 101 is 1100101.
