Q1. Which of the following printers is used in conjunction with computers and uses dry ink powder?

- (A) Laser printer
- (B) Daisy wheel
- (C) Thermal printer
- (D) Band printer

Solution: (a) Laser printers use toner cartridges which print thousands of pages so you don't need to worry about replacements anytime soon. Daisy wheel → Daisy wheel printing is an impact printing technology. It uses interchangeable pre-formed type elements, each with typically 96 glyphs, to generate high-quality output comparable to premium typewriters such as the IBM Selectric, but two to three times faster. Thermal printers → Thermal printers are dot-matrix printers that operate by driving heated pins against special heat-sensitive paper to "burn" the image onto the paper. Band printer → A line printer that uses a metal band, or loop, of type characters as its printing mechanism.

Q2. Which of the following companies developed the .avi format?

- (A) Microsoft
- (B) Apple
- (C) IBM
- (D) Sun Microsystems

Solution: (a) AVI stands for Audio Video Interleave, a widely used video file format created by Microsoft in 1992.

Q3. Which of the following is a valid email address?

- (A) john123@.net
- (B) mySchool@gmail.com
- (C) abc@def@gmail.com
- (D) @domainname.com

Solution: (b) A valid email address consists of an email prefix and an email domain, both in acceptable formats. The prefix appears to the left of the @ symbol. The domain appears to the right of the @ symbol. For example, in the address example@mail.com, "example" is the email prefix, and "mail.com" is the email domain.

Q4. Which of the following is the slowest type of Internet service ?

- (A) 3G and 4G
- (B) Digital subscriber line
- (C) Satellite
- (D) Dial up

Solution: (d) Dial-up is by far the slowest of all Internet connections available. Use of dial-up requires a separate phone line, since users must connect via the telephone to their Internet service provider. Speeds max out at about 56Kbps, which is only about a tenth of the speed of even the slowest broadband connections.

Q5. If all the inputs of a logic gate are '0', for which gate(s) will the output be '1'?

- (A) A NAND or an EX-OR gate
- (B) A NOR or an EX-NOR gate
- (C) An OR or an EX-OR gate
- (D) An AND or an EX-OR gate

Solution: The correct answer is (b) A NOR or an EX-NOR gate. A NOR gate outputs 1 when all its inputs are 0 — because NOR is the negation of OR, and an OR gate outputs 0 when all inputs are 0, so NOR outputs 1 in this case. An EX-NOR gate (also called XNOR) outputs 1 when the number of 1s among its inputs is even — if all inputs are 0, the output is 1, because zero is an even count of 1s. A NAND gate outputs 1 unless all inputs are 1, so it doesn't specifically fit the condition of all inputs being 0 (it also outputs 1 in that case, but so do many other combinations — NOR/XNOR is the more precise match here per standard exam convention). An EX-OR gate

outputs 1 when the number of 1s is odd — if all inputs are 0, the output would be 0, not 1.

Q6. Software, such as Explorer and Firefox, are referred to as _____.

- (A) Application Software
- (B) Operating system
- (C) System software
- (D) Utility software

Solution: (a) Application Software → It is a computer software package that performs a specific function directly for an end user or, in some cases, for another application for e.g. MS Office, PowerPoint, MS Word, Excel, and Outlook. Operating system → An operating system (OS) is the program that, after being initially loaded into the computer by a boot program, manages all of the other application programs in a computer for e.g. Apple macOS, Microsoft Windows. System software → System software is a type of computer program that is designed to run a computer's hardware and application programs for e.g. Linux, Android. Utility software → Utility software helps users configure, analyze, optimize and maintain a computer for e.g. Antivirus, backup software, file manager, disk compression tool.

Q7. Which of the following is NOT an antivirus software?

- (A) Avira
- (B) Kaspersky
- (C) McAfee
- (D) Firefox

Solution: The correct answer is option D. Firefox is not an antivirus software. It is a web browser developed by Mozilla that lets users browse the internet and access web content. The other options listed (Avira, Kaspersky, and McAfee) are all antivirus software programs designed to protect computers and devices from malware and other security threats.

Q8. The file responsible for starting MS-Excel is _____.

- (A) MS.Excel
- (B) MS.exe
- (C) Excel.exe
- (D) Excel.com

Solution: (c) Excel is a spreadsheet program included in Microsoft Office Suite. Excel.exe is the main executable for Microsoft Excel.

Q9. In an MS Excel sheet, a cell address is composed of the _____.

- (A) cell's row
- (B) cell's column and row
- (C) cell's column
- (D) worksheet number

Solution: (b) A cell reference is an alphanumeric value used to identify a specific cell in a spreadsheet. Each cell address contains 'one or more letters followed by a number. The letter or letters identify the column and the number represents the row.

Q10. Which of the following notation is used to represent a cell range that includes cells A1, A2, A3, A4 and A5 in an MS Excel sheet?

- (A) A1 ; A5
- (B) \$A1 : \$A5
- (C) A1\$: A5\$
- (D) A1 : A5

Solution: (d) Cell range can be notified using the cell addresses of the first and last cells in the cell range, separated by a colon. For A1, A2, A3, A4 and A5 one can write A1 : A5.

Q11. is having more memory addresses than are physically available.

- (A) **Virtual memory**
- (B) System software
- (C) Application software
- (D) RAM

Solution: (a) Virtual memory is stored on the hard drive and is used when the RAM is filled. Physical memory is limited to the size of the RAM chips installed in the computer, so virtual memory has the capability for more storage. System software → System software is a type of computer program that is designed to run a computer's hardware and application programs. Examples are Android, iOS etc. Application software → An application program is a computer program designed to carry out a specific task other than one relating to the operation of the computer itself, typically to be used by end-users. Word processors, media players, and accounting software are examples.

Q12. In MS Office 2010, when you open a clipboard and press the  Option  button at the bottom of the panel, which of the following option is NOT available?

- (A) Show Office Clipboard When Ctrl+C Pressed Twice
- (B) **Show Status in Address Bar When Copying**
- (C) Show Office Clipboard Icon on Taskbar
- (D) Show Office Clipboard Automatically

Solution: (b) In MS Office 2010, when we open a clipboard and press the  Option  button at the bottom of the panel, Show Status in Address Bar When Copying option is NOT available.

Q13. Which of the following is not a tool used by search engines for searching?

- (A) **URL**
- (B) Search Algorithm
- (C) Indexer
- (D) Crawler

Solution: (a) URL (Uniform Resource Locator), is the address of a given unique resource on the Web. A search engine is a software system designed to carry out web searches, Examples: Google, Bing, Indexer, Crawler, Yandex, Ask, DuckDuckGO, Naver, AOL, Seznam, etc.

Q14. _____ shortcut key is used in MS-Excel 2010 to start a new line of text or add spacing between lines or paragraphs of text in a worksheet cell.

- (A) Ctrl + Space
- (B) Ctrl + Enter
- (C) **ALT + Enter**
- (D) ALT + Space

Solution: (c) ALT + Enter → It is used to insert a line break, to start a new line of text or add spacing between lines or paragraphs of text in a worksheet cell. Ctrl + Space → It is used to select an entire row in a worksheet. Ctrl + Enter → It is used to fill the selected cell range with the current entry. ALT + Space → It is used to display the control menu for the Excel window.

Q15. Which one of the following is not an online chat software?

- (A) **AWS (amazon web service)**
- (B) Internet Relay Chat
- (C) Google Talk
- (D) Slack

Solution: (a) Amazon web service is an online platform that provides scalable and cost-effective cloud computing solutions whereas other three Internet Relay Chat, Google talk and Slack are examples of free and online chat software.

Q16. Why do we use Alt+Shift+X?

- (A) **To mark an index entry.**
- (B) To Go to the previous footnote.
- (C) To print the merged document.

(D) To preview the mail merge.

Solution: (a) We use Alt+Shift+X to mark an index entry.

Q17. Consider the following statements about HTML. P: HTML was designed to store and transport data Q: All HTML documents must start with a document type declaration: R: HTML is the standard markup language for Web pages. Which of these statement(s) is/are False?

- (A) Only R
- (B) Only P and Q
- (C) Only P and R
- (D) **Only P**

Solution: (d) HTML stands for Hyper Text Markup Language. HTML is the standard markup language for creating Web pages. HTML describes the structure of a Web page. HTML consists of a series of elements. HTML elements tell the browser how to display the content. The declaration is used to inform a website visitor's browser that the document being rendered is an HTML document.

Q18. The Average function is listed in the drop-down menu of which of the following tools?

- (A) Move function
- (B) **Auto Sum function**
- (C) Financial function
- (D) Insert function

Solution: The correct answer is (b) Auto Sum function. The Average function is listed in the drop-down menu of the Auto Sum function in spreadsheet applications like Microsoft Excel. The Auto Sum feature provides quick access to various statistical functions, like Sum, Average, Count, Max and Min, letting users efficiently perform calculations on selected data ranges. By clicking the Auto Sum button, users can easily select the Average function to find the average of a set of values in the spreadsheet. Move function: the Move function is unrelated to finding averages; it's typically used to relocate cells or data within a spreadsheet. Financial function: financial functions are specific formulas for performing financial calculations, like interest rates and loan payments, but they don't directly include the Average function in their primary drop-down menu. Insert function: the Insert function option is used to add various elements to a spreadsheet, including functions, but it doesn't specifically highlight the Average function in a dedicated menu like the Auto Sum feature does.

Q19. Which one of the following is not related to the Insert option of the pop up menu that appears when you right click on a cell in a table in MS Word 2007?

- (A) Insert Rows Above
- (B) **Insert Rows Across**
- (C) Insert Rows Below
- (D) Insert Cells

Solution: (b) When one Right-click to open the pop-up menu and select Insert, then following options are shown: Insert Column to the left, Insert column to the right, Insert Rows above, Insert row below and Insert cells. Hence option (b) is the right answer.

Q20. What is the full form of DMA?

- (A) Dynamic Memory Access
- (B) Direct Method Access
- (C) Double Memory Access
- (D) **Direct Memory Access**

Solution: (d) DMA (Direct Memory Access) is a method that allows an input/output device to send or receive data directly to or from the main memory, by passing the CPU to speed up memory Operations.

Q21. _____ is a type of non-volatile memory that erases data in units called blocks.

- (A) **Flash memory**
- (B) Virtual memory
- (C) Buffer

(D) None of the above

Solution: The correct answer is option A. Flash memory, also known as flash storage, is a type of non-volatile memory that erases data in units called blocks and rewrites data at the byte level. Flash memory is widely used for storage and data transfer in consumer devices, enterprise systems and industrial applications. Virtual memory is a memory management technique where secondary memory can be used as if it were a part of main memory. Virtual memory is a common technique used in a computer's operating system (OS). Buffer memory is a temporary storage area in main memory (RAM) that stores data being transferred between two or more devices or between an application and a device. Buffering compensates for the difference in transfer speed between the sender and receiver of data.

Q22. In MS Word, which of the following keyboard shortcuts should be used to align a paragraph in the centre?

- (A) Ctrl + J
- (B) Ctrl + E**
- (C) Ctrl + C
- (D) Alt + C

Solution: (b) Ctrl + E shortcuts should be used to align a paragraph in the centre. Ctrl + J justifies the current line to evenly space its text or words between the left and right margins of the page. Ctrl + C is used to copy text or images. Alt+C is a keyboard shortcut most often used to view the favorites in Internet Explorer.

Q23. Which of the following is NOT a type of RAM?

- (A) DRAM
- (B) SRAM
- (C) SDRAM
- (D) EPRAM**

Solution: The correct answer is option D. There is no such term as EPRAM — instead it is EPROM, which stands for Electrically Programmable Read Only Memory. DRAM: Dynamic Random Access Memory. It is a common type of RAM used in computers and devices. It stores data in capacitors within memory cells and requires continuous refreshing to maintain data integrity. It is volatile memory, meaning data is lost when power is removed. SRAM: Static Random Access Memory. SRAM is another type of RAM that uses flip-flop circuits to store data. It is faster and more reliable than DRAM but is more expensive and consumes more power — it is also volatile memory. SDRAM: Synchronous Dynamic Random Access Memory. This is a type of DRAM that is synchronized with the system clock to improve performance, giving it a higher data transfer rate than conventional DRAM. EPROM: Electrically Programmable Read-Only Memory. This is non-volatile memory that retains data even when power is removed — however, it cannot be modified or erased after programming.

Q24. Presentation of a series of still images on a projection screen or electronic display device is called as ____ .

- (A) Video
- (B) Movie clip
- (C) Slide runner
- (D) Slide show**

Solution: (d) A slide show is a presentation of a series of still images (slides) on a projection screen or electronic display device, typically in a prearranged sequence.

Q25. What is the image or text verification used by computer systems to distinguish between human and bot/spam input called?

- (A) CAPTCHA**
- (B) Tele-verification
- (C) Group Policy
- (D) Firewall

Solution: The correct answer is option A. CAPTCHA stands for 'Completely Automated Public Turing test to tell Computers and Humans Apart.' It is a security mechanism used by computer systems to distinguish between human users and automated bot or spam

input. CAPTCHAs typically present users with challenges that are easy for humans to solve but difficult for automated scripts. These challenges can include tasks such as recognizing distorted text, solving puzzles, identifying objects in images, or even performing audio-based tests.
