Q1. _____ shows the files, folders and drives on your computer, making it easy to navigate from one location to another within the file hierarchy.

- (A) Microsoft Internet Explorer
- (B) Windows Explorer**
- (C) My Computer
- (D) Folders Manager

Solution: (b) Microsoft Windows Explorer is a graphical file management utility for the Windows operating system (OS). Each time that a computer user accesses a disk or opens a folder containing files, they are using the Windows/File Explorer utility.

Q2. What is the term used to denote the repetition of data in DBMS?

- (A) Redundancy**
- (B) Reappear
- (C) Restrict
- (D) Repeating

Solution: (a) Repetition of data in the DBMS was called Data Redundancy.

Q3. How can you benefit from using templates when creating a PowerPoint presentation?

- (A) Templates automatically generate slide content and animation.
- (B) Templates provide a consistent design and save time in formatting.**
- (C) Templates allow users to insert audio and video clips in slides.
- (D) Templates enable real-time collaboration with multiple users.

Solution: The correct answer is (b). Using templates in PowerPoint provides a consistent design across all slides, helping maintain a uniform style and layout, and saves time in formatting through pre-designed slide layouts, fonts, colours and styles, requiring less effort to create visually appealing presentations. Templates don't specifically enable inserting audio/video (that's a general PowerPoint feature, not template-specific), don't enable real-time collaboration (that's typically a cloud service feature like OneDrive/Google Slides), and don't automatically generate content or animations — they provide design and layout only.

Q4. Which one is a very powerful feature of Sql and performs calculations on data, modifies individual data items and manipulates output for a group of rows?

- (A) Order by
- (B) Group Function**
- (C) Group by
- (D) Both B and C

Solution: (b) Group functions are mathematical functions to operate on sets of rows to give one result per set. The types of group functions (also called aggregate functions) are: AVG, that calculates the average of the specified columns in a set of rows, COUNT, calculating the number of rows in a set. Order by → An ORDER BY clause in SQL specifies that a SQL SELECT statement returns a result set with the rows being sorted by the values of one or more columns. Group by → The GROUP BY clause groups the selected rows based on identical values in a column or expression.

Q5. A pixel is _____ .

- (A) Picture element or dot on a screen**
- (B) Point of ink on a user printed paper
- (C) Point of ink on a inkjet printed page
- (D) Light beam used in printing paper

Solution: (a) A pixel is the smallest unit of a digital image or graphic that can be displayed and represented on a digital display device.

Q6. Microprocessors can be used to make _____ .

- (A) computer
- (B) digital system
- (C) calculators
- (D) All of these**

Solution: (d) Microprocessors are used in many other electronic devices, including cell phones, kitchen appliances, automobile emission-control and timing devices, electronic games, telephone switching systems, thermal controls in the home, and security systems.

Q7. Which of the following is NOT a service provided by the internet?

- (A) Ethernet**
- (B) FTP
- (C) World Wide Web
- (D) Email

Solution: The correct answer is option A. Ethernet itself is not a service provided by the internet. Instead, it is a common networking technology used to connect devices like computers, switches and routers for a Local Area Network (LAN) at a physical location, such as a home or office.

Q8. Which of the following is not a Biometric?

- (A) Retina scan
- (B) Irish scan
- (C) Face recognition
- (D) None of these**

Solution: (d) All the given options are biometric.

Q9. If all the Network components are connected to the same cable, then the certain topology is called _____ .

- (A) Mesh
- (B) Bus**
- (C) Ring
- (D) Star

Solution: (b) A bus topology is used in a LAN (Local Area Network) where different nodes are linked to a particular cable or otherwise a single backbone. Mesh → Mesh topology is a type of networking where all nodes cooperate to distribute data amongst each other. Ring → Ring network topologies are used when a simple network is needed. They are suitable for locations that do not rely on very high data-transfer speeds, and where the network is unlikely to alter in size or structure. Star → Star topology is a network topology in which each network component is physically connected to a central node such as a router, hub or switch.

Q10. What is the purpose of the keyboard shortcut **Ctrl+Shift+F3 in MS Word 2010?**

- (A) This shortcut displays alignment options
- (B) This shortcut switches the text between uppercase, lowercase and title case**
- (C) This shortcut displays font size options
- (D) This shortcut displays font colour options

Solution: (b) The Shift + F3 keyboard shortcut allows to quickly change the text case of text without having to use the button built into Microsoft Word.

Q11. How many types of arithmetic operations Does the ALU of the computer perform?

- (A) 2
- (B) 5
- (C) 8
- (D) 4**

Solution: (d) ALU can perform 4 arithmetic operations(addition,subtraction, multiplication and division).

Q12. Each process must be waiting for a resource which is being held by another process, which in turn is waiting for the first process to release the resource. then it is called as_____ .

- (A) **Circular wait**
- (B) Mutual exclusion
- (C) Partial allocation
- (D) Non preemptive

Solution: (a) One process is waiting for the resource, which is held by the second process, which is also waiting for the resource held by the third process etc. This creates a circular chain. Mutual exclusion → At least one resource must be held in a non-shareable mode; that is, only one process at a time can use the resource.Non preemptive → A resource can be released only voluntarily by the process holding it.

Q13. Which one of the following is a series of operations that convert raw facts into useful information?

- (A) Schema
- (B) **Data processing**
- (C) Data Processing System
- (D) Data recovery

Solution: (b) Data processing occurs when data is collected and translated into usable information.Schema → A database schema is considered the blueprint of a database which describes how the data may relate to other tables or other data models.Data Processing System → A data processing system is a combination of machines, people, and processes that for a set of inputs produces a defined set of outputs. Data recovery → Data recovery is the process of restoring data that has been lost, accidentally deleted, corrupted or made inaccessible.

Q14. It takes advantage of basic hardware and software security characteristics.

- (A) **System design**
- (B) Data access control
- (C) System access control
- (D) None of these

Solution: (a) Systems design is the process of defining elements of a system like modules, architecture, components and their interfaces and data for a system based on the specified requirements.

Q15. Which of the following keyboard shortcuts in MS-Excel selects the entire row?

- (A) **Shift + Space**
- (B) Shift + ctrl
- (C) Shift + alt
- (D) Space + enter

Solution: The correct answer is option A. In Microsoft Excel, you can select the entire row of the active cell using the keyboard shortcut Shift + Space. This can be quite useful for quickly selecting and manipulating data within a specific row. Similarly, using Ctrl+Space selects the entire column of the active cell.

Q16. 8 Which of the following feature of MS Excel is used to make all content visible within a cell by displaying it on multiple lines?

- (A) Indentation
- (B) **Wrap Text**
- (C) Merge & Center
- (D) Orientation

Solution: (b) Each time you click the Increase Indent button, Excel adds a small amount of space between the cell border and the data itself. Wrap Text is a feature that shows all information in a cell, even if it overflows the cell boundary. Excel offers two page orientation options: landscape and portrait. Landscape orients the page horizontally, while portrait orients the page vertically.

Q17. What is the shortcut key to align the paragraph at the center of the page?

- (A) **Ctrl + E**
- (B) Ctrl + C
- (C) Ctrl + V
- (D) Ctrl + B

Solution: (a) Ctrl + E is used to align the paragraph at the center of the page in the word document.Ctrl + C → It is used to copy the selection. Ctrl + V → It is used to paste the contents of the clipboard. Ctrl + B → It is used to bold highlighted selection.

Q18. Trojan Horse is a form of:

- (A) **Virus attack**
- (B) Service attack
- (C) Slammer worm
- (D) Melissa worm

Solution: The correct answer is (a) Virus attack. A Trojan Horse is a type of malicious software (malware) that tricks users into believing it is a legitimate program. Unlike a virus, it doesn't replicate itself, but it can cause significant damage by gaining unauthorized access to a system — often disguised as an innocent application or file, so users download or run it, giving attackers control. A 'service attack' generally refers to a Denial of Service (DoS) attack aimed at disrupting normal operation. The Slammer worm was a fast-spreading worm from 2003 exploiting vulnerabilities in Microsoft SQL Server. The Melissa worm was a macro virus that spread via email in 1999 through infected Word documents.

Q19. What is a computer that provides its services to another computer on a network called?

- (A) Backend system
- (B) Client
- (C) **Server**
- (D) Gateway

Solution: The correct answer is option C. A computer that provides services, resources or information to other computers on a network is called a server. Servers are designed to handle various tasks such as hosting websites, managing email, storing files, providing databases, and much more. Clients, on the other hand, are computers or devices that request and use the services provided by a server. Servers and clients work together to enable communication and data exchange in a networked environment.

Q20. First computer mouse was built by_____.

- (A) **Douglas Engelbart**
- (B) William English
- (C) Oaniel Cooper
- (D) Robert Zawacki

Solution: (a) Mouse was invented by Douglas Engelbart at Stanford Research Center in 1963.

Q21. Which one does not allow Execution due to any waiting event?

- (A) **Deadlock**
- (B) Thread
- (C) Fork
- (D) Shell

Solution: (a) Deadlock is a situation where a set of processes are blocked because each process is holding a resource and waiting for another resource acquired by some other process. Thread → A thread is the smallest unit of processing that can be performed in an OS.Fork → Fork is an operation whereby a process creates a copy of itself. It is an interface which is required for compliance with the POSIX and Single UNIX Specification standards.Shell → The shell is the outermost layer of the operating system. Shells incorporate a programming language to control processes and files, as well as to start and control other programs.

Q22. disk encryption is a technology (hardware or

software) where data is encrypted before storage.

- (A) Half
- (B) Whole**
- (C) Double
- (D) Triple

Solution: (b) Disk encryption is a technology which protects information by converting it into unreadable code that cannot be deciphered easily by unauthorized people. Disk encryption uses software or hardware to encrypt every bit of data that goes on a disk or disk volume.

Q23. Thesaurus tool in MS Word is used for

- (A) Spelling suggestions
- (B) Grammar options
- (C) Synonyms and Antonyms words**
- (D) Deleting a word

Solution: (c) Thesaurus is a tool, which is used in MS Word or Microsoft Word to search for synonyms and synonyms for a particular selected word.

Q24. External devices such as printers, keyboards and modems are known as

- (A) add-on devices
- (B) peripherals**
- (C) extra software devices
- (D) PC expansion slot add-ons

Solution: (b) External devices such as printers, keyboards and modems are known as peripherals or external devices.

Q25. Under which of the following menu tabs are Page Setup options usually available in MS-Word 2007 ?

- (A) Review
- (B) Page Layout**
- (C) Home
- (D) Insert

Solution: (b) Page Setup options usually available in Page layout. Options under page layout- You can set margins, apply themes, control of page orientation and size, add sections and line breaks, display line numbers, and set paragraph indentation and lines.
