Q1. A group of four bits is called a:

- (A) megabyte
- (B) nibble**
- (C) byte
- (D) kilobyte

Solution: (b) A nibble is a group of four bits or half an octet. It is also known as half-byte or tetrad.

Q2. Which among the following is a small set of data holding place that is a part of the computer processor and may hold an instruction, a storage address, or any kind of data?

- (A) Register**
- (B) WAN
- (C) Bus
- (D) Address

Solution: (a) Registers are used to quickly accept, store and transfer data and instructions that are being used immediately by the CPU. These registers are the top of the memory hierarchy and are the fastest way for the system to manipulate data. The number and size of registers vary from processor to processor. A bus is a high-speed internal connection. Buses are used to send control signals and data between the processor and other components.

Q3. Which of the following tabs in MS Word 365 has Bullets and Numbering?

- (A) Edit
- (B) File
- (C) Home**
- (D) Page layout

Solution: The correct answer is (c) Home. (c) Home: the Bullets and Numbering option is present in the Home tab of MS Word 365. It's part of the Paragraph group, where you can create bulleted or numbered lists. Edit: there is no separate tab called 'Edit' in MS Word. Editing options are in other tabs or the right-click menu. File: the File tab is used for file-related tasks like opening, saving or printing a document. Page Layout: the Page Layout tab is for page formatting options, like margins, orientation and size, but not for bullets and numbering.

Q4. When you want to send a copy of an email to someone else without the original recipient knowing, which field should be used?

- (A) CC
- (B) BCC**
- (C) From
- (D) To

Solution: The correct answer is (b) BCC (Blind Carbon Copy). (b) BCC: the BCC field is used to send a copy of the email to other recipients, and their information stays hidden from other recipients. CC: a copy of the email is sent in the CC field, but all recipients can see it. From: the From field shows who sent the email. To: the To field specifies the primary recipient.

Q5. Which technology is used in compact discs?

- (A) Electric
- (B) Laser**
- (C) Electromagnetic
- (D) Aeronautics

Solution: The correct answer is (b) Laser. Explanation: Laser: Compact Discs (CDs) use laser technology to read and write data. A laser beam is used to scan the disc's surface, where data is stored in the form of small depressions (pits) and flat areas (lands). The reflection of the laser beam lets the CD player interpret and process the stored information. Electric: while electricity is used to power the

CD player, the reading and writing process specifically relies on laser technology. Electromagnetic: CDs don't use electromagnetic waves for data storage or retrieval; they rely solely on laser light. Aeronautics: aeronautics is unrelated to compact discs and plays no role in the technology.

Q6. While sending an email, the _____ line describes the contents of the message.

- (A) To
- (B) Subjects**
- (C) Contents
- (D) CC

Solution: The correct answer is option B. While sending an email, the 'Subject' line is used to describe the content or purpose of the message. It provides a brief description of what the email is about, helping the recipient understand the topic before opening and reading the full email content.

Q7. What will happen when you select a cell of an MS-Excel 2010 worksheet and press F2 key ?

- (A) The cell will switch to editing mode so that its content can be modified**
- (B) The content of the cell will be deleted
- (C) The font color of the content of the cell will be changed
- (D) The background color of the cell will be changed

Solution: (a) The cell will switch to editing mode so that its content can be modified. Function Keys in Excel are the faster way of doing certain tasks by using the keyboard instead of a mouse. The F2 key will edit the active cell and put the insertion point at the end of its contents.

Q8. Where is the RAM located in a computer?

- (A) Input device
- (B) Output device
- (C) External memory
- (D) Motherboard**

Solution: The correct answer is (d) Motherboard. Explanation: RAM (Random Access Memory) is located on the computer's motherboard. It is an important component that temporarily stores the data and instructions the CPU actively uses during operations. RAM lets the CPU access data quickly, improving the computer's overall speed and efficiency. The motherboard provides the necessary connections for RAM to communicate with other components, such as the CPU and storage devices. Other options explained: Input device — an input device is for providing data to the computer, such as a keyboard, mouse, or microphone. RAM is not an input device; it temporarily stores data for processing, not for direct input. Output device — an output device is used to display or present processed data, such as a monitor, printer, or speakers. RAM doesn't fall into this category, since it isn't used to output data but to store data during processing. External memory — external memory refers to storage devices such as USB drives, external hard drives, or optical discs. RAM is not external memory; it is located inside the computer, on the motherboard.

Q9. Where the date and time are available on the desktop?

- (A) Task Bar**
- (B) Keyboard
- (C) Recycle Bin
- (D) My Computer

Solution: (a) The taskbar is the access point for programs displayed on the desktop, even if the program is minimized, it is located at the bottom of the screen.

Q10. On a standard keyboard, the Ctrl, Shift and Alt keys are

called:

- (A) Adjustment keys
- (B) Function keys
- (C) **Modifier keys**
- (D) Alphanumeric keys

Solution: The correct answer is (c) Modifier keys. These keys (Ctrl, Shift, Alt) modify the function of other keys when used in combination, enabling shortcuts and extra functionality. 'Adjustment keys' is not a standard keyboard category. Function keys (F1–F12) perform specific tasks but are a different category from Ctrl/Shift/Alt. Alphanumeric keys refer to letters and numbers, unrelated to Ctrl/Shift/Alt.

Q11. What is the use of Alt+Shift+D in ms word?

- (A) **It is used to insert a DATE field.**
- (B) It is used to insert a PAGE field.
- (C) It is used to Insert an empty field.
- (D) It is used to insert a footnote.

Solution: (a) In Ms word the function of Alt+Shift+D is to insert a DATE field.

Q12. Which of the following is not a font style?

- (A) **Superscript**
- (B) Bold
- (C) Italic
- (D) Regular

Solution: (a) A superscript is a number, figure, symbol, or indicator that is smaller than the normal line of type and is set slightly above it.

Q13. You can detect spelling and grammar errors from_____ .

- (A) Shift + F7
- (B) Ctrl + F7
- (C) Alt + F7
- (D) **F7**

Solution: (d) F7 → It is used to check the spelling of selected text. Shift + F7 → It is used to run a Thesaurus check on the selected word. Ctrl + F7 → It is used to choose the move command. Alt + F7 → It is used to find the next misspelling or grammatical error.

Q14. In E-R diagram, relationship type is represented by_____ .

- (A) ellipse
- (B) dashed ellipse
- (C) **rectangle**
- (D) diamond

Solution: (c) An entity is an object or component of data. An entity is represented as a rectangle in an ER diagram.

Q15. Instructions and memory address are represented by

- (A) character code
- (B) **binary codes**
- (C) binary word
- (D) parity bit

Solution: (b) Instructions and memory addresses are represented by Binary codes. A binary code represents text, computer processor instructions, or any other data using a two-symbol system.

Q16. Some viruses have a delayed payload, which is sometimes called a_____ .

- (A) **logic bomb**
- (B) time
- (C) antivirus
- (D) All of these

Solution: (a) A logic bomb is a piece of code inserted into an operating system or software application that implements a malicious function after a certain amount of time, or specific

conditions are met.

Q17. Which tab in the 'Font' group dialog box contains options to apply Font Effects in MS Word 2010?

- (A) **Font tab**
- (B) Standard Toolbar
- (C) Text Effects
- (D) Character Spacing

Solution: (a) The Font tab in the Display Options property sheet is used to select a session display font and to configure additional font options. The standard toolbar contains buttons representing commands such as New, Open, Save, and Print. Text Effects means applying special formats to the content such as an Outline, Shadow, Reflection, or Glow. Character Spacing is used to stretch or compress the text.

Q18. In MS-Excel 2010, rows are identified by:

- (A) A, B, C
- (B) **1, 2, 3**
- (C) *, &, ^
- (D) @, \$, %

Solution: (b) By default, Excel uses the A1 reference style, which refers to columns as letters (A through IV, for a total of 256 columns), and refers to rows as numbers (1 through 65,536). These letters and numbers are called row and column headings.

Q19. All of the following terms are related to spreadsheet software except_____ .

- (A) worksheet
- (B) cell
- (C) formula
- (D) **virus detection**

Solution: (d) Virus detection does not come under spreadsheet software.

Q20. Which of the following is NOT database software used on computers?

- (A) Oracle
- (B) FoxPro
- (C) **MS Word**
- (D) MS Access

Solution: The correct answer is (c) MS Word. MS Word is a word-processing software used to create documents, not to manage databases — it lacks the functionality to store, manage and manipulate data like database software does. Oracle is a powerful database management system for handling large amounts of data. FoxPro was an older database management system used to develop database applications. MS Access is Microsoft's database management system for creating, managing and querying databases.

Q21. ISDN Stands for _____ .

- (A) Integrated Standard Digital Network
- (B) Integrated Secure Digital Network
- (C) **Integrated Services Digital Network**
- (D) Integrated Symmetric Digital Network

Solution: (a) ISDN (integrated services digital network), all-digital high-speed network provided by telephone carriers that allowed voice and data to be carried over existing telephone circuits.

Q22. Formatting a disk results in _____.

- (A) Saved in the disk
- (B) Copied from the disk
- (C) **Deleted from the disk**
- (D) Arranging the data in the disk

Solution: (c) Formatting the disk results in deleting the information from disk.

Q23. Which of the following is NOT a valid MS Excel 2007

formula?

- (A) SUMIF
- (B) SUM
- (C) SUMPRODUCT
- (D) SUMADD**

Solution: (d) SUMADD is NOT a valid MS Excel 2007 formula

Q24. _____ is the bit-rate of available or consumed information capacity, typically expressed in metric multiples of bits per second.

- (A) Latency
- (B) Throughput
- (C) Bandwidth**
- (D) Protocol

Solution: The correct answer is option C. Bandwidth refers to the rate at which data can be transmitted over a network or communication channel. It is typically expressed in bits per second (bps) or its multiples (kilobits per second, megabits per second, etc.). Bandwidth indicates the maximum data transfer rate, meaning how much data can be transmitted in a given time. Latency: latency refers to the delay between sending data and the reception of the first bit — it is a measure of the time taken for data to travel from source to destination. Throughput: throughput is the actual amount of data that can be transmitted over a network or channel in a given period — it is often measured in bits per second. Protocol: a protocol is a set of rules and conventions that governs communication between devices or systems — it defines how data is formatted, transmitted and received.

Q25. Which one of the following commands is used to display both query and output?

- (A) List
- (B) R**
- (C) Select
- (D) Describe

Solution: (b) R command is used to display both query and output. List → LIST displays case values for variables in the active dataset. The output is similar to the output produced by the PRINT command. However, LIST is a procedure and reads data. Describe → Describe command shows the structure of the table which include name of the column, data-type of column and the nullability which means that column can contain null values or not.
