Q1. How many colours are available in a computer monitor with a 16-bit-per-pixel colour depth?

- (A) 256
- (B) 16
- (C) 16777216
- (D) 65536

Solution: The correct answer is option D. A computer monitor with a 16-bit-per-pixel colour depth can display 65,536 different colours. This is because each pixel is represented by 16 bits, allowing $2^{16} = 65,536$ possible colour combinations. This colour depth provides a relatively wide range of colours but is not as high as displays with higher bit depths such as 24-bit or 32-bit, which can represent millions of colours.

Q2. Which one is used to insert a link?

- (A) Ctrl+K
- (B) Ctrl+N
- (C) Ctrl+Z
- (D) Ctrl+F

Solution: (a) Ctrl+K → It is used to insert hyperlink. Ctrl+N → It is used to create a new document. Ctrl+Z → To undo an action, press Ctrl + Z. Ctrl+F → Control+F is the keyboard shortcut for the Find command.

Q3. Which of the following is most commonly used to identify return visitors to a website?

- (A) cookies
- (B) logged-in visitors
- (C) digital certificates
- (D) electronic time stamping

Solution: (a) A cookie is a piece of data from a website that is stored within a web browser that the website can retrieve at a later time. Cookies are used to tell the server that users have returned to a particular website.

Q4. This component is required to process data into information and consists of integrated circuits.

- (A) Hard disk
- (B) RAM
- (C) CPU
- (D) ROM

Solution: (c) A CPU processes the data and instruction provided through the input devices and then passes the processed result to the output devices.

Q5. _____ owns the search engine Bing?

- (A) Google
- (B) Microsoft
- (C) Amazon
- (D) IBM

Solution: The correct answer is option B. Microsoft Bing (commonly known as Bing) is a web search engine owned and operated by Microsoft. The service originated from Microsoft's previous search engines: MSN Search, Windows Live Search and later Live Search.

Q6. Which one performs simply an informal way of describing a program and it does not follow any Syntax Strictly?

- (A) Mnemonic
- (B) Opcode
- (C) Pseudocode
- (D) Operand

Solution: (c) Pseudocode is an informal way of programming

description that does not require any strict programming language syntax or underlying technology considerations. Opcode → The opcode is the instruction that is executed by the CPU and the operand is the data or memory location used to execute that instruction. Operand → An operand can refer to an element in a programming language, such as C++ or Java, or to an element that is part of a computer's instruction code.

Q7. Which of the following is required to run Skype on a computer? 1. A stable internet connection 2. A microphone 3. A webcam

- (A) 1, 2 and 3
- (B) Only 1 and 2
- (C) Only 2 and 3
- (D) Only 1 and 3

Solution: The correct answer is: a. Explanation: General requirements for running Skype: stable internet connection — Skype needs a reliable and stable internet connection to make voice and video calls, and to send and receive messages. Microphone — Skype needs a microphone to capture and transmit audio for voice communication. Webcam — Skype needs a webcam to capture and send video for video calls. So, the correct answer would be: 1, 2, and 3.

Q8. A program or piece of code that is loaded onto a person's computer without their knowledge and runs against their will is a type of malware called:

- (A) Spyware
- (B) Virus
- (C) Trojan Horse
- (D) Zeus

Solution: The correct answer is (b) Virus. A virus is a type of malware that, once executed, replicates itself and spreads to other files or programs on the computer, often without the user's knowledge. It can run against the user's will and perform various malicious activities such as corrupting or deleting files. A virus must be triggered by the user to begin its action (e.g. opening an infected file), but once active it can operate on the system without further user interaction. Spyware is malware that monitors/collects information about the user without consent, but generally doesn't replicate or spread like a virus. A Trojan Horse is malware disguised as a legitimate program, but unlike a virus, it doesn't replicate itself — it requires the user to install it and often grants unauthorized system access. Zeus is a specific type of Trojan typically used to steal financial information — a type of banking Trojan, not a general term for all malware.

Q9. What is the function of Ctrl+Shift+V ?

- (A) It is used to paste the selected formatting.
- (B) It is used to paste the contents of the Spike.
- (C) It is used to copy the selected formatting.
- (D) It is used to insert an AutoText block.

Solution: (a) Ctrl+Shift+V is used to paste the selected formatting.

Q10. An optical input device that interprets pencil marks on paper media:

- (A) Punch card reader
- (B) Optical scanner
- (C) Optical mark recognition
- (D) Stylus

Solution: The correct answer is option C. Optical Mark Recognition: OMR accepts human-made marks on specially printed paper or journals used in experiments, surveys, etc. Punch card reader: a computer punch card reader, or simply computer card reader, is a computer input device used to read computer programs and data

from punch cards in source or executable form. Optical scanner: an optical scanner is an input device that uses light rays to scan images, codes, text or objects and converts them into two-dimensional (2D) digital files, then sends them to computers and fax machines. Stylus: in computing, a stylus (or stylus pen) is a small pen-shaped device whose tip position can be tracked on a computer monitor. It is used to draw or select by tapping. A stylus functions similarly to a pointing device like a mouse or touchpad; its use is generally called pen computing.

Q11. In MS-DOS, which of the following commands is used to delete directory with all sub-directories and files?

- (A) Deltree
- (B) Delete
- (C) Del
- (D) Move

Solution: (a) DELTREE is a command in some Microsoft operating systems, SpartaDOS X and FreeDOS that recursively deletes an entire subdirectory of files.

Q12. A _____ is an intersection of a row and a column in a worksheet.

- (A) cell
- (B) row
- (C) workbook
- (D) column

Solution: (a) A cell is a rectangular area formed by the intersection of a column and a row. Cells are identified by the Cell Name, which is found by combining the Column Letter with the Row Number.

Q13. What is the maximum number of characters displayed in an Excel cell?

- (A) 16,384 characters
- (B) 32,767 characters
- (C) 65,536 characters
- (D) 128,000 characters

Solution: The correct answer is option B. This means that in Microsoft Excel, a cell can display up to a maximum of 32,767 characters — this includes letters, numbers, symbols, spaces and any other characters you can enter into a cell. However, while this is the maximum limit according to Microsoft's specifications, it's important to note that displaying such a large number of characters in a single cell may not be very practical for readability and could potentially affect the performance of your Excel worksheet.

Q14. What is the full form of TCP/IP, with reference to internet protocols?

- (A) Transmission Control Protocol and International Protocol
- (B) Transmission Control Protocol and Internet Protocol
- (C) Transmission Control Protocol and Intranet Protocol
- (D) Transfer Control Protocol and Internet Protocol

Solution: (b) TCP/IP stands for Transmission Control Protocol/Internet Protocol and is a suite of communication protocols used to interconnect network devices on the internet.

Q15. What do we call an attempt to gain unauthorized access to a user's system or information by pretending to be the user?

- (A) Spoofing
- (B) Hacker
- (C) Cracker
- (D) Phishing

Solution: (a) Spoofing attack → Spoofing is a specific type of cyber-attack in which someone attempts to use a computer, device, or network to trick other computer networks by masquerading as a legitimate entity. Cracker → Cracker an individual who attempts to access computer systems without authorization. Hacker → The term refers to anyone who uses their abilities to gain unauthorized access to systems or networks in order to commit crimes. Phishing → Phishing is a type of cybersecurity attack during which

malicious actors send messages pretending to be a trusted person or entity.

Q16. 1. Which of the following logical functions in MS-Excel 2007 is used to check if any of the arguments are TRUE or FALSE?

- (A) NAND
- (B) FALSE
- (C) OR
- (D) TRUE

Solution: (c) OR: Returns TRUE if any argument evaluates to TRUE and Returns False if any argument evaluates to False.

Q17. What is the result of the following MS-Excel formula? =256/8/4/2

- (A) 16
- (B) 0
- (C) 64
- (D) 4

Solution: (d) The result of 256/8/4/2 in MS-Excel formula = 4. Basic Excel Formulas SUM, COUNT, COUNTA, COUNTBLANK, AVERAGE, MIN Excel, MAX Excel LEN Excel, TRIM Excel, IF Excel. $256/8/4/2 = 256/8 = 32$ $32/4 = 8$ $8/2 = 4$

Q18. When there is a wild card search we use _____ condition.

- (A) In condition
- (B) Like condition
- (C) Isnull condition
- (D) Between and condition

Solution: (a) A wildcard character is used to substitute one or more characters in a string. Wildcard characters are used with the LIKE operator.

Q19. A hacker that changes or forges information in an electronic resource is known as _____.

- (A) Coping
- (B) Sniffing
- (C) Terrorism
- (D) Data diddling

Solution: (d) Data diddling is a type of cybercrime in which data is altered as it is entered into a computer system, most often by a data entry clerk or a computer virus. Sniffing → Sniffing is the act of intercepting and monitoring traffic on a network.

Q20. In the database are distinct items that don't have much meaning to you in a given context.

- (A) Fields
- (B) Data
- (C) Queries
- (D) Properties

Solution: (b) Data are distinct items that don't have much meaning to you in a given context. Data when processed into information which will bring meaning to the data. Various data analysis and data mining tools are available to process the data. Field is a data structure for a single piece of data. Fields are organized into records, which contain all the information within the table relevant to a specific entity.

Q21. In the relational modes, cardinality is termed as _____.

- (A) number of tuples
- (B) number of attributes
- (C) number of tables
- (D) number of constraints

Solution: (a) The number of tuples in a relation is called its cardinality.

Q22. Which of the following is called a super-network or meta-network?

- (A) MAN
- (B) LAN
- (C) Internet**
- (D) Server

Solution: The correct answer is option C. The term 'internet' is often known as a super-network or meta-network. It is a global network that connects millions of smaller networks, including LANs (Local Area Networks), MANs (Metropolitan Area Networks) and other networks, allowing them to communicate and share information worldwide. The internet functions as a network of networks, making it a super-network in itself.

Q23. Which of the following keyboard shortcuts is used to run spelling and Grammar Check in MS Word 2010?

- (A) F1
- (B) F2
- (C) F7**
- (D) F9

Solution: (c) F7 ââ Used to spell check and grammar check a document in Microsoft Apps (e.g. Word). F1 ââ Opens the Help screen for almost every program. F2 ââ Allows you to rename a selected file or folder. F9 ââ Refreshes a document in Microsoft Word and sends and receives emails in Outlook.

Q24. File extensions are used in order to_____

- (A) identify the file type**
- (B) name the file
- (C) ensure the file name is not lost
- (D) identify the file

Solution: (a) Extensions tell your computer which application created or can open the file and which icon to use for the file. For example, the docx extension tells your computer that Microsoft Word can open the file and to display a Word icon when you view it in File Explorer.

Q25. A hybrid computer is the one having the combined properties of

- (A) super and microcomputers
- (B) mini and microcomputers
- (C) analog and digital computers**
- (D) super and mini computers

Solution: (c) These are the combination of analog and digital computers. Machines used in hospitals like ECG and DIALYSIS are the commonly used hybrid computers.
