Q1. Which of the following Windows keyboard shortcuts restores a minimized window?

- (A) Alt + Space + X
- (B) Alt + Space + N
- (C) Alt + Space + R**
- (D) Alt + F4

Solution: The correct answer is option C.

Q2. A proxy server is used for which of the following?

- (A) To provide TCP/IP
- (B) To process client requests for Web pages
- (C) To process client requests for database access
- (D) To provide security against unauthorized users**

Solution: (d) A proxy server is a system or router that provides a gateway between users and the internet. Therefore, it helps prevent cyber attackers from entering a private network.

Q3. MS DOS is an operating system that has a/an:

- (A) Open-source origin
- (B) Graphical user interface
- (C) Voice line interface
- (D) Command line interface**

Solution: The correct answer is option D. MS-DOS (Microsoft Disk Operating System) is an operating system that primarily has a command-line interface. Users interact with the system by typing commands at the command prompt. MS-DOS was a widely used operating system in the early days of personal computing and played an important role in the history of computing.

Q4. 17 Which of the following is not anti-viruses software?

- (A) Norton
- (B) F-Prot
- (C) Oracle**
- (D) McAfee

Solution: (c) Oracle Solution → Oracle Database is an object-relational database management system produced and marketed by oracle corporation.

Q5. What is Window Explorer?

- (A) Personal Computer
- (B) Network
- (C) Drive
- (D) File Manager**

Solution: (d) Microsoft Windows Explorer is a graphical file management utility for the Windows operating system (OS). Each time that a computer user accesses a disk or opens a folder containing files, they are using the Windows/File Explorer utility.

Q6. Which of the following keyboard shortcuts is used to display non-editable HTML source code for the current page in Chrome browser ?

- (A) ALT + U
- (B) CTRL + U**
- (C) ALT+ S
- (D) CTRL + S

Solution: (b) Ctrl + U → It opens the current page's source code in a new browser tab. Ctrl + S → To save a workbook/spreadsheet. .

Q7. In MS-Word 2010, if you press the Tab key within a table, the cursor moves to the next _____ of the table.

- (A) Cell**
- (B) Data
- (C) Row

(D) CellLine

Solution: (a) The tab key is one of the most important keys on a keyboard. It is used to move the cursor to the next field or option in a dialog box, or to move to the next cell in a spreadsheet.

Q8. The name of the world's first electronic digital computer is:

- (A) ENIAC**
- (B) PROLOG
- (C) PARAM
- (D) UNIVAC

Solution: The correct answer is (a) ENIAC. Explanation: ENIAC (Electronic Numerical Integrator and Computer) is considered the world's first general-purpose electronic digital computer. It was developed by John Presper Eckert and John W. Mauchly at the University of Pennsylvania between 1943 and 1945. ENIAC was designed for the U.S. Army to solve large numerical calculations, particularly ballistic trajectory calculations. It was a massive machine, with about 18,000 vacuum tubes, and it was housed in a large room. It could perform 5,000 additions, 357 multiplications, and 38 divisions per second, and it revolutionized the world of computing, paving the way for future electronic computing systems. Other options explained: PROLOG is not a computer, but a programming language, developed in the early 1970s by Alain Colmerauer and Philippe Roussel, widely used in artificial intelligence (AI) and computational linguistics. PARAM is a supercomputer series developed in India in the 1990s under the National Supercomputing Mission. These machines were designed for scientific and industrial research, but they came after ENIAC. UNIVAC (Universal Automatic Computer) was the first commercially produced computer in the United States, developed by Eckert and Mauchly after ENIAC, and became well known for large-scale data processing. Although UNIVAC was a pioneering computer, it did not come before ENIAC.

Q9. The instructions that tell a computer how to carry out the processing tasks are referred to as computer_____

- (A) programs**
- (B) processors
- (C) input devices
- (D) memory modules

Solution: (a) A program is a set of instructions that a computer follows in order to perform a particular task.

Q10. What do you conclude from the term 'floating point' in computers?

- (A) A method of representing integers using binary digits.
- (B) A way to store only positive real numbers in a computer.
- (C) A method of representing and performing operations on real numbers with fractional parts.**
- (D) A technique for encrypting data during transmission.

Solution: The correct answer is option C. In computer science and mathematics, floating point refers to a method of representing and performing arithmetic operations on real numbers with fractional parts in a way that allows a wide range of values to be represented using a fixed amount of memory. This method involves a binary representation consisting of a sign bit, a mantissa and an exponent to determine the scale of the number. Floating-point representation is used to approximate real numbers with a limited set of binary digits, enabling the computer to handle and perform calculations on a wide range of values.

Q11. Which one is used to show the system date, time and time zone?

- (A) SYS DATE
- (B) Both a and c
- (C) SYSTIME

(D) SYSTIMESTAMP

Solution: (d) SYSTIMESTAMP → The SYSTIMESTAMP() is an Oracle Date/Time function. This function is used to get the current date and time of the system. SYSDATE → SYSDATE returns the current date and time set for the operating system on which the database server resides.

Q12. Which among the following options is the line that describes the contents of the message while sending an e-mail?

- (A) BCC
- (B) to
- (C) **subject**
- (D) cc

Solution: (c) Subject line in short describes the content of an email. BCC stands for "blind carbon copy." Just like CC, BCC is a way of sending copies of an email to other people. The difference between the two is that, while you can see a list of recipients when CC is used, that's not the case with BCC. It's called blind carbon copy because the other recipients won't be able to see that someone else has been sent a copy of the email.

Q13. Which of the following formulas when executed will give an error in Microsoft Excel 2016?

- (A) **= SUM (A9 : A15) – B4 / 10**
- (B) = SUM (A9 : A15) * 10
- (C) =SUM (L9 : L12) * SUM (K9 : K12) / (10 - 9)
- (D) = SUM (A9 : A15) * SUM (K9 : K15)

Solution: (a) The correct answer is = SUM (A9 : A15) – B4 / 10.

Q14. What is the use of Ctrl + 9 in ms excel ?

- (A) The function of Ctrl + 9 is to delete a column.
- (B) It helps to unhide selected rows.
- (C) **It helps to hide selected rows.**
- (D) This shortcut key helps to select the entire row.

Solution: (c) The shortcut key which helps to hide selected rows in ms excel is Ctrl + 9.

Q15. Which of the following keyboard shortcuts is used to perform paste operation in MS Word?

- (A) **CTRL + V**
- (B) CTRL + P
- (C) ALT + P
- (D) CTRL + T

Solution: (a) CTRL + V shortcuts are used to perform paste operations in MS Word. CTRL + P is used to print files. Alt + P opens the Page Layout tab in the Ribbon. Ctrl+T is a keyboard shortcut most often used to open a new tab in an Internet browser.

Q16. Which of the following is the time taken by the CPU to access a location in memory ?

- (A) Instruction cycle
- (B) Memory formatting time
- (C) **Memory access time**
- (D) CPU frequency

Solution: (c) Memory access time is the time taken by the CPU to access a location in memory .

Q17. Which of the following keyboard shortcuts in MS-Excel copies the leftmost cell of the selection to the right?

- (A) Ctrl + V
- (B) Ctrl + C
- (C) **Ctrl + R**
- (D) Ctrl + Y

Solution: The correct answer is option C. The table below shows some MS Excel keyboard shortcuts.

Q18. Which of the following layers is responsible for converting

electrical impulse to bit streams?

- (A) Presentation
- (B) Network
- (C) Data link
- (D) **Physical**

Solution: (d) OSI Model, Layer 1 conveys the bit stream - electrical impulse, light or radio signal through the network at the electrical and mechanical level. It provides the hardware means of sending and receiving data on a carrier, including defining cables, cards and physical aspects. Fast Ethernet, RS232, and ATM are protocols with physical layer components.

Q19. System running more than one process concurrently are called _____

- (A) Multiprocessing
- (B) **Multiprogramming**
- (C) Real time
- (D) Batch processing

Solution: (b) Multiprogramming operating systems allow the execution of multiple processes by monitoring their process states and switching in between processes. It executes multiple programs to avoid CPU and memory underutilization. for e.g. MS-Excel, Firefox or Google Chrome browser. Real time operating system (RTOS) → These operating systems are designed to respond to an event within a predetermined Time for e.g. linux. Batch processing is a technique for automating and processing multiple transactions as a single group for e.g. Unix. Multiprocessing → Multiprocessor operating systems are used in operating systems to boost the performance of multiple CPUs within a single computer system. for e.g. Windows NT, 2000, XP, and Unix.

Q20. Which of the following functions is used to display only current system date in MS Excel 2010?

- (A) **Today**
- (B) Now
- (C) Time
- (D) Date

Solution: (a) The TODAY function returns the current date, and will continually update each time the worksheet is updated. The NOW Function in Excel is a formula that displays the current date and time. The TIME function creates a valid Excel time based on supplied values for hour, minute, and second. The DATE function returns a serial number that corresponds to an Excel date.

Q21. 9 Which of the following stores the cut or copied texts in MS Word?

- (A) Table
- (B) Footer
- (C) Header
- (D) **Clipboard**

Solution: (d) Clipboard stores the cut or copied texts in MS Word. Footers are located in the margin area at the bottom of a page. A header is a separate bit of text at the top of a printed page.

Q22. When you first turn on a computer, the CPU is preset to execute instructions stored in the _____ .

- (A) RAM
- (B) flash memory
- (C) **ROM**
- (D) CD-ROM

Solution: (c) The CPU starts and fetches instructions into RAM from the BIOS, which is stored in the ROM. Flash memory → It is a kind of semiconductor based non-volatile rewritable memory, used in digital cameras, mobile phones, printers, etc. Compact disc read-only memory (CD-ROM) → It is used in a computer, it has a lot of information recorded on it. The information cannot be changed or removed

Q23. Which of the following belongs to the 'Effects' category with

reference to text formatting in MS Word?

- (A) Bold
- (B) Regular
- (C) Italic
- (D) Strike through**

Solution: (d) Strikethrough belongs to the 'Effects' category with reference to text formatting in MS Word. Press Alt + K to select Strikethrough .

Q24. In MS-Excel 2010 _____ are named from A onwards and _____ are named from 1 onwards.

- (A) table, pivot table
- (B) chart, graph
- (C) columns, rows**
- (D) rows, columns

Solution: (c) In MS-Excel 2010 columns are named from A onwards and rows are named from 1 onwards. Rows are the horizontal lines in the worksheet, and columns are the vertical lines in the worksheet. In the worksheet, the total rows are 10,48,576, while the total columns are 16,384.

Q25. Which one of the following is used to enter into a personal account?

- (A) Sign-in**
- (B) Sign-up
- (C) Log-in
- (D) All of these

Solution: (a) Sign-in → It is used to take some action to access a secured program or web page on a computer. Sign-up → It means to enroll or register for something. Log-in → Login is the procedure used to get access to an operating system or application, usually in a remote computer.
