

COMPUTER TEST -6

Join our Telegram Channel

Q1. Which of the following terms is associated with Internet E-mail?

- (A) Plotter
- (B) Slide presentation
- (C) Bookmark**
- (D) Pie chart

Solution: (c) In Outlook, the Bookmark feature can help you find or skip to a specific place at ease without scrolling through large blocks of text. Plotters are used to print graphical output on paper. It interprets computer commands and makes line drawings on paper using multicolored automated pens.

Q2. What is the keyboard shortcut to perform the 'Redo' operation in MS-PowerPoint?

- (A) Ctrl + R
- (B) Ctrl + Z
- (C) Ctrl + Y**
- (D) Alt + R

Solution: The correct answer is option C. In MS PowerPoint, the keyboard shortcut to perform the 'Redo' operation is Ctrl + Y. This shortcut lets you redo the last undone action, essentially reversing the effect of the 'Undo' operation (Ctrl + Z).

Q3. A computer program used for business application is _____

- (A) COBOL**
- (B) LOGO
- (C) BASIC
- (D) FORTRAN

Solution: (a) COBOL stands for Common Business Oriented Language which is designed for business uses. Logo is a simple computer programming language which can be used to control devices. FORTRAN is also known as Formula translation is a programming language which is specially meant for carrying out number based computations and solving scientific problems. BASIC (Beginner's All purpose Symbolic Instruction Code) is used for educational purpose.

Q4. _____ is the intercompany communication of business documents in a standard.

- (A) Electronic Data Instruction
- (B) Electronic Data Interchange**
- (C) Emergency data Interchange
- (D) Electronic Data Information

Solution: (b) Electronic Data Interchange (EDI) is the computer-to-computer exchange of business documents in a standard electronic format between business partners.

Q5. A _____ generator is used to print files on paper.

- (A) Printer
- (B) Report**
- (C) Both A and B
- (D) Scanner

Solution: (b) It's a computer program that allows you to directly retrieve all the data you want from a database, spreadsheet, XML stream, or any other source, and views it online or export it to different document formats such as Excel, PDF, and CSV that satisfy a specific human readership. Scanner → A scanner is a device usually connected to a computer. Its main function is to scan or take a picture of the document, digitize the information and present it on the computer screen.

Q6. Which of the following protocols allows a workstation to dynamically access maildrops on a server host in a useful

manner?

- (A) SNMP
- (B) ICMP
- (C) POP3**
- (D) DHCP

Solution: (c) The Post Office Protocol - Version 3 (POP3) is intended to permit a workstation to dynamically access a maildrop on a server host in a useful fashion. Simple Network Management Protocol (SNMP) is an Internet Standard protocol used to monitor and manage the network devices connected over an IP. The Internet Control Message Protocol (ICMP) is a protocol that devices within a network use to communicate problems with data transmission. DHCP (Dynamic Host Configuration Protocol) is a network management protocol used to dynamically assign an Internet Protocol (IP) address to any device, or node, on a network so they can communicate using IP.

Q7. Arrange in ascending order: megabyte, terabyte, kilobyte, gigabyte

- (A) Megabyte, terabyte, gigabyte, kilobyte
- (B) Kilobyte, gigabyte, megabyte, terabyte
- (C) Kilobyte, megabyte, gigabyte, terabyte**
- (D) Kilobyte, megabyte, gigabyte, terabyte

Solution: The correct answer is option C.

Q8. What does MICR stand for?

- (A) Magnetic Ink Character Register
- (B) Magnetic Ink Code Reader
- (C) Magnetic Ink Code Register
- (D) Magnetic Ink Character Recognition**

Solution: (d) MICR (Magnetic Ink Character Recognition). MICR reads the characters by examining their shapes in a matrix form and the information is then passed on to the computer.

Q9. Which of the following MS-Excel 2010 function is used to converts a date that is stored as text to a serial number that Excel recognizes as a date?

- (A) DATEVALUE()**
- (B) TODAY()
- (C) NETWORKDAYS()
- (D) EDATE()

Solution: (a) To convert a text date in a cell to a serial number, use the DATEVALUE function. TODAY() → Returns the current date. NETWORKDAYS() → NETWORKDAYS calculates the number of workdays between two dates. EDATE() → Returns the serial number that represents the date that is the indicated number of months before or after a specified date.

Q10. Seek time is _____ .

- (A) Time to position the head over proper track**
- (B) Time to position the head over proper sector
- (C) Time to position the head over proper cylinder
- (D) The time to control the speed of the system

Solution: A Seek time is the time taken for a disk drive to locate the area on the disk where the data to be read is stored.

Q11. CPU speed is measured in

- (A) Bits per second
- (B) Mega Hertz**
- (C) Bytes per second
- (D) Mega bytes per second

Solution: The correct answer is option B. CPU speed, also known as clock speed or clock frequency, is typically measured in Mega Hertz

(MHz) or Giga Hertz (GHz). These units represent the number of cycles or oscillations generated by the CPU's clock per second. Mega Hertz equals one million cycles per second, and Giga Hertz equals one billion cycles per second. This measurement indicates how quickly the CPU can execute instructions and process data. Bits per second, bytes per second and megabytes per second are measurements used in network speed data transfer rates, which differ from CPU speed.

Q12. MS-Word 2010, opens a new document with the temporary name as _____.

- (A) Book
- (B) Book 1
- (C) Document1**
- (D) Document

Solution: (c) The default page in MS Word is Document 1.

Q13. What is Windows Explorer?

- (A) Personal Computer
- (B) Network
- (C) File Manager**
- (D) Web Browser

Solution: (c) It allows users to manage files, folders and network connections, as well as search for files and related components.

Q14. Computer gets _____ with the help of a mouse, joystick or keyboard.

- (A) input**
- (B) insert
- (C) delete
- (D) output

Solution: (a) The data is entered into the main memory through the input devices for e.g. mouse, keyboard etc.

Q15. Storage that loses its data after the power is turned off is referred to as _____.

- (A) Non-volatile**
- (B) Volatile storage
- (C) Sequential storage
- (D) Random memory

Solution: (a) Non-volatile memory is typically used for the task of secondary storage or long-term persistent storage. When a computer is shut down anything contained in the non volatile memory is not lost. Volatile storage → The most widely used form of primary storage today is a volatile form of random access memory (RAM), meaning that when the computer is shut down, anything contained in RAM is lost. Sequential storage → Sequential access memory (SAM) is a class of data storage devices that read stored data in a sequence.

Q16. Which of the following refers to a terminal attached to a minicomputer or mainframe and used to monitor the status of the system?

- (A) Monitor
- (B) Mouse
- (C) Console**
- (D) Controller

Solution: (c) Console is designed to input the operational commands and to output messages including those about equipment failures and errors.

Q17. On the Internet, _____ is used to convert a URL into an IP address.

- (A) Domain Name System
- (B) Donaim Name System
- (C) Domain Name Session
- (D) Domain Name System**

Solution: (d) The domain name system (DNS) is a naming database in which internet domain names are located and translated into

Internet Protocol (IP) addresses. It is the mechanism that looks up the URL and associates it to its corresponding IP address.

Q18. Raw, unprocessed facts, including text, numbers, images, and sounds, are called _____.

- (A) Applets
- (B) Data**
- (C) Metaware
- (D) Product

Solution: (b) Data is a raw form of knowledge and, on its own, doesn't carry any significance or purpose. Data can come in the form of text, observations, figures, images, numbers, graphs, or symbols.

Q19. A serial cable is an example of which layer

- (A) Presentation Layer
- (B) Network Layer
- (C) Data Link Layer
- (D) Physical layer**

Solution: The correct answer is option D. A serial cable is an example of a hardware connection that operates at the physical layer of the OSI (Open Systems Interconnection) model. The physical layer deals with the physical transmission of data over a physical medium such as cables, wires and signals. Serial cables are used to transfer data one bit at a time, making them a direct representation of the physical layer in networking.

Q20. A collection of worksheets in ms excel is called _____.

- (A) Excel book
- (B) Worksheets
- (C) Excel sheets
- (D) Workbook**

Solution: (d) A worksheet consists of cells in which you can enter and calculate data. A collection of worksheets is called Workbook.

Q21. Which of the following enables to determine how often a user visited a Website?

- (A) Hacker
- (B) Spammer
- (C) Phish
- (D) Cookie**

Solution: (d) Cookie → Cookies are text files with small pieces of data like a username and password that are used to identify your computer as you use a computer network. Hacker → The term refers to anyone who uses their abilities to gain unauthorized access to systems or networks in order to commit crimes. Phishing → Phishing is a type of cybersecurity attack during which malicious actors send messages pretending to be a trusted person or entity. Spammer → Spam is any kind of unwanted, unsolicited digital communication that gets sent out in bulk. The person who sends spam is known as spammer.

Q22. What is the full form of DHCP in a networking system ?

- (A) Dynamic Host Configuration Protocol**
- (B) Data Host Control Panel
- (C) Dynamic Host Control Point
- (D) Display House Control Protocol

Solution: (a) The full form of DHCP in a networking system is Dynamic Host Configuration Protocol. It is a network management protocol used on internet protocol networks.

Q23. A processor that collects the transmissions from several communication media and send them over a single line that operates at a higher capacity is called _____.

- (A) multiplexer**
- (B) bridge
- (C) hub
- (D) router

Solution: (a) A communications device that combines transmissions

from several I/O devices into one line is a multiplexer. Bridges are used to connect two subnetworks that use interchangeable protocols. It combines two LANs to form an extended LAN. A router transmits data from one network to another in the form of packets. A hub transmits data from one device to another in the form of binary bits.

Q24. What is the full form of 'CC' in the context of email?

- (A) Common Copy
- (B) Carbon Copy**
- (C) Confidential Copy
- (D) Copy Communication

Solution: The correct answer is Carbon Copy. Carbon Copy (CC): In email, 'CC' stands for 'Carbon Copy'. It means sending a copy of the email to additional recipients besides the primary recipient. The email addresses in the CC field are visible to all recipients.

Q25. Caps lock and Num lock Keys are called as ____ keys.

- (A) Ctrl
- (B) Shift
- (C) Window
- (D) Toggle**

Solution: (d) Caps lock and Num lock Keys are called Toggle keys because when pressed, they toggle or change their status from one state to another state.
