Q1. _____ shortcut key is used in MS-Excel 2010 to open the review tab.

- (A) ALT + A
- (B) ALT + N
- (C) ALT + R**
- (D) ALT + I

Solution: (c) In Microsoft Excel, pressing Alt + R opens the Review tab in the Ribbon. ALT+A → Alt + A is a keyboard shortcut often used to open the Data tab in Excel. ALT + N → Open the Insert tab to insert tables, pictures and shapes, headers, or text boxes.

Q2. Mobile phones are an example of which type of communication channel?

- (A) Full duplex**
- (B) Simplex
- (C) Half duplex
- (D) None of these

Solution: (a) Mobile phone is an electric device used for full duplex two way radio telecommunication over a cellular network of base stations known as cell sites.

Q3. Which of the following is an appropriate method to shutdown the computer?

- (A) Click 'Start' then select 'Restart'
- (B) Click 'Start' then switch user
- (C) Switch off monitor
- (D) Click 'Start' then select 'Shut down'**

Solution: (d) To shut down the PC we need to click on the start button and then on shut down.

Q4. In which year was the first version of Microsoft Word, Word 1.0, launched?

- (A) 1983**
- (B) 1992
- (C) 1996
- (D) 1985

Solution: The correct answer is: a. The first version of Microsoft Word, Word 1.0, was launched in October 1983. It was developed by former Xerox programmers Charles Simonyi and Richard Brodie. Word 1.0 was the first word processing program to actually use a mouse. It was first released for Xenix and MS-DOS, but these versions weren't very successful. The first version of Word for Windows was released in 1989, and it achieved commercial success in 1990 with Windows 3.0.

Q5. Select the correct sequence of steps showing how to double underline text in MS Word.

- (A) a. Select text ⇒ Click Insert tab; then click on arrow of 'Font' group. ⇒ Select Underline Style as double line.
- (B) a. Select text. ⇒ Click Page layout tab; then click on arrow of 'Font' group. ⇒ Select Underline Style as double line.
- (C) a. Select text. ⇒ Click Home tab; then click on arrow of 'Font' group ⇒ Select Underline Style as double line.**
- (D) a. Select text. ⇒ Click Layout tab; then click on arrow of 'Font' group. ⇒ Select Underline Style as double line.

Solution: (c) To double underline text: a. Select text. b. Click Home tab; then click on arrow of 'Font' group c. Select Underline Style as double line.

Q6. How many types of memory does a computer have?

- (A) Two**
- (B) Four
- (C) Eight
- (D) One

Solution: (a) There are technically two types of computer memory: primary and secondary. Primary memory → The memory unit that communicates directly with the CPU is called main memory or internal memory or primary memory. Examples are RAM, ROM. Secondary memory → This memory stores much larger amounts of data and information for extended periods of time. It is also non-volatile in nature. It is a permanent storage. Examples are HDD (Hard Disk Drive), CD-ROM, Floppy etc.

Q7. What is the full form of IMPS with reference to e-banking services?

- (A) Immediate Paid Service
- (B) Immediate Payment Service**
- (C) Immediate Payment Solution
- (D) Instant Payment Service

Solution: .8.(b) Immediate Payment Service (IMPS) is an instant interbank electronic fund transfer service through mobile phones. It is also being extended through other channels such as ATMs, Internet Banking, etc.

Q8. Which of the following is a worldwide system of computer networks?

- (A) Intranet
- (B) Webpage
- (C) Internet**
- (D) Website

Solution: (c) Internet stands for Interconnected system is a global communication system that links together thousands of individual networks. An Intranet, is a local or restricted network that enables people to store, organize, and share information within an organization. A web page is a hypertext document on the World Wide Web. A website is a collection of web pages and related content that is identified by a common domain name and published on at least one web server.

Q9. Which one records data bits as tiny magnetic spots?

- (A) Data Transfer rate
- (B) Track**
- (C) Sector
- (D) Hard disk

Solution: (b) Track → A disk drive track is a circular path on the surface of a disk or diskette on which information is magnetically recorded and from which recorded information is read.

Q10. Which one is true about the generation of computers?

- (A) The second generation of computer (1955-1963)
- (B) The first generation of computer (1946-1959)**
- (C) Third generation of computer (1963-73)
- (D) Fourth generation of computer (1972 onwards)

Solution: (b) 1946-1959 is the period of the first generation computer. Second Generation of Computers (1957 – 1963) → The second generation of computers consists of two types of devices: transistors and magnetic core. For e.g., IBM 1401, IBM 1920, etc. Third generation of computer → The third generation computer was started in 1965 and ended around 1971. Third generation computers start using integrated circuits instead of transistors. Fourth generation of computer → Fourth Generation Computers. After third-generation computers, which mostly utilized microprocessors, fourth-generation computers were released in 1972.

Q11. Which of the following servers converts an IP address into a domain name?

- (A) Email
- (B) Cloud services
- (C) DNS**

(D) P2P

Solution: The correct answer is (c) DNS. (c) DNS (Domain Name System): DNS is responsible for converting human-readable domain names (like www.example.com) into machine-readable IP addresses (like 192.0.2.1). It works like a directory for the internet, translating domain names into their corresponding IP addresses. Email: email servers are responsible for sending and managing email, not for converting IP addresses into domain names. Cloud Services: cloud services provide online storage, computing power and other services, but they aren't specifically involved in converting IP addresses into domain names. P2P (Peer to Peer): P2P networks allow resources to be shared with each other, but they aren't involved in domain name resolution.

Q12. Which of the following is a criminal activity attempting to acquire sensitive information such as passwords, credit cards, debits by masquerading as a trustworthy person or business in electronic communication?

- (A) Spoofing
- (B) Phishing
- (C) Stalking
- (D) Hacking

Solution: (b) Phishing → Phishing is a term used to describe a malicious individual or group who scam users. They do so by sending e-mails or creating web pages designed to collect an individual's online bank, credit card, or other login information. Spoofing attack → Spoofing is a specific type of cyber-attack in which someone attempts to use a computer, device, or network to trick other computer networks by masquerading as a legitimate entity. Hacking → Hacking is the act of identifying and then exploiting weaknesses in a computer system or network, usually to gain unauthorized access to personal or organizational data.

Q13. Which of the given options best matches the items of the LIST-1 with the item of LIST-2 with reference to editing cells in a spreadsheet? LIST-1 LIST-2 1. Enter (a) moves you to the next cell to the right 2. Shift+tab (b) moves you to next cell down 3. Tab (c) moves you in direction of the arrow 4. Arrow key (d) moves you to the next cell to the left

- (A) (1)-b (2)-d (3)-a (4)-c
- (B) (1)-b (2)-a (3)-d (4)-c
- (C) (1)-a (2)-d (3)-b (4)-c
- (D) (1)-c (2)-d (3)-a (4)-b

Solution: (a) Extra facts- Some shortcut keys in MS EXCEL - To create a new workbook. Ctrl + N. To open an existing workbook. Ctrl + O, To save a workbook/spreadsheet. Ctrl + S, To close the current workbook. Ctrl + W, To close Excel. Ctrl + F4, To move to the next sheet. Ctrl + PageDown, To move to the previous sheet. Ctrl + PageUp, To go to the Data tab. Alt + A.

Q14. Which of the following is the ascending order of the data hierarchy?

- (A) Nibble → Byte → Megabyte- Kilobyte
- (B) Bit → Nibble → Byte - Kilobyte
- (C) Gigabyte → Kilobyte → Nibble - Bit
- (D) Bit → Nibble → Byte - Megabyte

Solution: (d) 4 Bit=1 nibble, 1nibble=0.5 byte, 1 megabyte= 1 million byte.

Q15. Sam wants to reach as many people as possible with his presentation via email. Which MS PowerPoint 365 feature can he use for this?

- (A) Save As
- (B) Print
- (C) Info
- (D) Share

Solution: The correct answer is (d) Share. The Share feature in MS PowerPoint 365 lets Sam easily share his presentation with a wide audience via email — sending it as an email attachment, a link, or collaborating with others via cloud services like OneDrive. Save As

lets you save the presentation in different formats but doesn't directly help share it. Print creates physical copies, not for sharing via email. Info shows file details like permissions and properties, not sharing via email.

Q16. Which layer connects the network support layers and user support layers?

- (A) Transport
- (B) Network
- (C) Data link
- (D) Session

Solution: The correct answer is option A. The transport layer is responsible for connecting the network support layers and user support layers in the OSI (Open Systems Interconnection) model. It provides end-to-end communication and ensures reliable transmission of data between devices across the network. The transport layer is also responsible for managing error detection, correction, flow control, and data segmentation and reassembly.

Q17. Which shortcut key is used to paste a slide in Microsoft PowerPoint?

- (A) CTRL + V
- (B) CTRL + P
- (C) CTRL + X
- (D) CTRL + C

Solution: The correct answer is (a) CTRL + V. Explanation: CTRL + V is a standard keyboard shortcut used to paste content in most applications, including Microsoft PowerPoint. After copying or cutting a slide, you can use this shortcut to paste it into the current presentation. Other options: CTRL + P is used for printing. CTRL + X is used to cut selected content. CTRL + C is used to copy selected content. So, the correct shortcut key to paste a slide is (a) CTRL + V.

Q18. The linking of computers with a communication system is called _____.

- (A) Networking
- (B) Pairing
- (C) Interlocking
- (D) Assembling

Solution: (a) Computer networking refers to interconnected computing devices that can exchange data and share resources with each other.

Q19. Which of the following include the file name and possibly a directory of folders?

- (A) File directory
- (B) Information packet
- (C) File specification
- (D) File extension

Solution: (a) A directory is a file system cataloging structure which contains references to other computer files, and possibly other directories. Information packet → A packet is a small segment of a larger message. Data sent over computer networks*, such as the Internet, is divided into packets. File extension → Extensions tell your computer which application created or can open the file and which icon to use for the file.

Q20. Which register is used to hold the current instruction which is being executed?

- (A) Program counter
- (B) Memory address
- (C) Memory buffer
- (D) Instruction

Solution: (d) An instruction register contains the actual or encoded instructions, not the addresses. It's part of the CPU control unit. Instruction register holds the actual instruction to be executed. Program counter → Program counter holds the address of the instruction that should be executed next. Memory address → Memory address is a reference to a specific memory

location used at various levels by software and hardware. Memory buffer → Buffer memory is a temporary storage area in the main memory (RAM) that stores data transferring between two or more devices or between an application and a device.

Q21. What term refers to living life through technology?

- (A) Fake living
- (B) False living
- (C) E-living**
- (D) Social Living

Solution: (c) E-living → This term has been used to describe the phenomenon of using Internet applications for a wide spectrum of life tasks including but not limited to socializing, networking, banking, planning vacations, and studying.

Q22. EDSAC stands for _____.

- (A) Electronic Data Storage and Access Calculator
- (B) Electronic Delay Storage Automatic Computer**
- (C) Efficient Data System for Advanced Computing
- (D) Enhanced Digital Software Architecture Computer

Solution: The correct answer is option B. EDSAC stands for Electronic Delay Storage Automatic Computer. It was an early British computer built at the University of Cambridge's Mathematical Laboratory in the late 1940s and early 1950s. EDSAC is considered one of the earliest stored-program computers and played a significant role in the development of computer architecture and programming.

Q23. 13 Raw, unprocessed facts, including text, numbers, images, and sounds, are called _____ (#a) Applets

- (A) Applets
- (B) Data**
- (C) Metaware
- (D) Product

Solution: (b) The raw, unprocessed facts, including text, numbers, images, and sounds, are called data. Data is collected from different sources. It is collected for different purposes.

Q24. Which among the following is not an Object Oriented Programming Language?

- (A) Python
- (B) C++
- (C) Java
- (D) PASCAL**

Solution: (d) Object-oriented language (OOL) is a high-level computer programming language that implements objects and their associated procedures within the programming context to create software programs. Significant object-oriented languages include → Java, C++, C#, Python, R, PHP, Visual Basic.NET, JavaScript. Pascal is an imperative and procedural programming language.

Q25. IPv4 address is _____

- (A) 8 bit
- (B) 16 bit
- (C) 32 bit**
- (D) 64 bit

Solution: (c) An IPv4 address is 32 bits. An IP Address is shown as 4 decimal numbers representing 4 bytes
