1

What is meant by 'mixed economy'?

a) Only private sector

b) Only public sector

c) Both private and public sectors ✓

d) Only foreign companies

EXPLANATION

Basis	Capitalist Economy	Socialist Economy	Mixed Economy
Ownership	Private ownership	Public ownership	Public + Private ownership
Economic Objective	Profit	Social welfare	Both
Role of Government	No role	Complete involvement	Limited role
Distribution of Income	Unequal	Equal	Less unequal
Economic Freedom	Complete	Lack of freedom	Limited freedom
Example	United States of America	USSR (Soviet Union), North Korea	India

2

In India, how many policy statements are mandated by the Fiscal responsibility and budget management act along with the budget?

(a) Two

(b) Three ✓

(c) Five

(d) Eight

EXPLANATION

FRBM ACT, 2003 (Fiscal Responsibility and Budget Management Act)

- It is an act of Parliament that ensures financial discipline.
- Better management of public funds.
- Aims to reduce the fiscal deficit.
- Under this act, it is mandatory for the government to present the following along with the budget: -

- Medium Term Fiscal Policy Statement:** Three-year fiscal targets are set in this.
- Fiscal Policy Strategy Statement:** Financial objectives and strategies are outlined in this.
- Macroeconomic Framework Statement:** Economic conditions (GDP growth, etc.) are assessed in this.

Type of Budget	Description
Balanced	Income = Expenditure
Unbalanced	Income $\neq$ Expenditure
Deficit Budget	Expenditure > Income
Surplus Budget	Income > Expenditure

3

In India, Financial Inclusion Index has ____ sub-indices.

(a) 2

(b) 3 ✓

(c) 4

(d) 5

EXPLANATION

Financial Inclusion Index (FI-Index)

- Introduced by the RBI. (2021)
- Constructed without any 'base year'.
- Published annually in July.

1

- Its value ranges from 0 (complete financial exclusion) to 100 (complete financial inclusion).
- It includes three parameters: Access (weightage 35%), Usage (weightage 45%), and Quality (weightage 20%).

4

Which curve shows all combinations of two goods that give a consumer equal satisfaction?

a) Indifference curve ✓

b) Budget constraint

c) Isoquant curve

d) Marginal cost curve

EXPLANATION

- **The Law of Diminishing Marginal Utility** states that as continuous units of a commodity are consumed, the satisfaction (marginal utility) derived from each additional unit decreases. Initial units provide more satisfaction, but gradually the utility decreases and can eventually become zero or even negative.

- **Indifference Curve:** An indifference curve shows the various combinations of two goods that give the consumer the same level of satisfaction. Since the level of satisfaction is the same at every point on the curve, the consumer remains "indifferent" between them.

- Its slope is called the **Marginal Rate of Substitution (MRS)**.

- **Budget Constraint:** A budget constraint shows all the combinations of two goods that a consumer can purchase based on their current income and the prices of those goods. It basically represents the limited consumption choices that a consumer can afford.

Isoquant Curve:

- An isoquant shows the various combinations of capital and labor that yield the same output (TPP).
- Its slope is called the Marginal Rate of Technical Substitution (MRTS).

Marginal Cost Curve:

- The marginal cost curve is a fundamental tool for producers to determine at what point they should stop increasing production in order to maximize profit.

Feature	Fixed Cost	Variable Cost
Meaning	The cost that does not change even when the quantity of production changes.	The cost that changes with the quantity of production.
Effect of Production	Whether production is zero or maximum, this cost always remains the same.	This cost increases when production increases, and decreases when production decreases.
Example	Rent, depreciation of machines, insurance premium, salary of permanent employees.	Raw materials, electricity/fuel expenses, wages of temporary workers, transportation cost.
Formula	Average Fixed Cost = FC/Q	Average Variable Cost = VC/Q
Shape	Rectangular hyperbola	U-shaped

- **FC** = Fixed Cost
- **Q** = Quantity of Production
- **VC** = Variable Cost

5 Assertion (A): GDP doesn't really tell the whole story when it comes to how well people in a country are actually doing
Reason (R): That's mainly because it doesn't take into account stuff like wear and tear of machines, pollution, or even how the money is divided among people

- a) Both A and R are true, and R is the correct explanation of A. ✓
b) Both A and R are true, but R is not the correct explanation of A.
c) A is true, but R is false.
d) A is false, but R is true.

EXPLANATION

Feature	Real Gross Domestic Product	Nominal Gross Domestic Product
Reference	A base year is taken as a reference.	Due to inflation, it is usually higher than real gross domestic product.
Price Basis	It is calculated at constant prices.	It is calculated at current prices.
Inflation Adjustment	It is inflation adjusted.	Here, inflation is not adjusted.

GDP Deflator:

- **Formula:** $(\text{Nominal GDP} / \text{Real GDP}) \times 100$
- The GDP deflator is also called "implicit price deflator" and "price index".
- India's GDP is calculated by the National Statistical Office (NSO) **under the Ministry of Statistics and Programme Implementation (MoSPI)**.
- The base year is considered to be 2011-2012.
- The current base year is 2011-2012, but the government has formed a committee to revise the base year to **2022-2023**.

Potential GDP:

- It is the total output that an economy would produce if its resources are fully utilized.

Recessionary Gap

- It is the situation when the actual output of an economy is less than its potential output.
- (Actual GDP < Potential GDP)

V.K.R.V. Rao used a scientific approach for the calculation of national income. He also provided the classification of a two-sector economy.

Dadabhai Naoroji

- First to calculate national income.
- In his famous book "Poverty and Un-British Rule in India" (1901), he presented the Drain of Wealth theory.

6

Which Indian state recorded negative population growth between 2001-2011?

- a) Kerala
b) Goa
c) Nagaland ✓
d) Manipur

EXPLANATION

Population Data:

- Total Population: **121.08** Crore
- Male Population: **62.37** Crore (51.54%)
- Female Population: **58.71** Crore (48.46%)
- Decadal Growth Rate (2001-11): **17.64%**
- Annual Growth Rate: **1.64%**

Category	Highest	Lowest
State	Meghalaya (27.8%) > Arunachal Pradesh > Bihar	Nagaland (-0.47%) > Kerala > Goa
UT	Dadra and Nagar Haveli (55.5%)	Lakshadweep (6.23%)

7

What is the main reason for the decline in core inflation across most countries in 2024?

- a) Fall in service sector productivity
b) Decrease in export demand
c) Drop in international commodity prices ✓
d) Increase in fiscal deficit

Core Inflation

- The inflation in which food and fuel prices are not included.

EXPLANATION

Core Inflation = Headline Inflation - Food and Fuel Inflation

Inflation मुद्रास्फीति

Inflation is increase in the general level of prices of Goods and Services.
People's purchasing power **decreases** in case of inflation
During inflation, the **debtor-borrower benefits more than the lender.**

Cause of Inflation

Types of Inflation:

- Creeping: 3-4%
- Walking: 4-10%
- Running: 10-20%
- Galloping: 20-100%
- Hyperinflation: >100%

Demand Pull Inflation	Cost Push Inflation
It is caused by an increase in demand (demand side inflation)	It is caused by an increase in production costs (supply side inflation)
It can be caused by strong economic growth, increased government spending or increased exports	It can be caused by increased wages, raw material prices, or indirect taxes
It can be short-term	It can be long-term
"Too much money chasing too few goods", an expression that describes demand-pull inflation	Increase in cost of any factors of Production and Input Cost

Shrinkflation

- It is the situation when companies keep the price of a product the same but reduce its quantity or quality.

8 According to Mahalanobis strategy, growth should primarily be driven by investment in ?

a) Agricultural inputs

b) Consumer goods sector

c) Capital goods sector ✓

d) Import-led services sector

EXPLANATION

Second Five-Year Plan:

- **Duration:** 1956-1961
- **Based on:** P. C. Mahalanobis Model.
- **Presented by:** Presented by India's first Prime Minister J. L. Nehru.
- **Target Growth Rate:** 4.5%
- **Achieved Rate:** 4.3% (Moderately successful)
- **Main Focus:** Development of basic and heavy industries. It laid more emphasis on rapid industrialization.
- **Three steel plants established:**
 - **Rourkela Steel Plant (RSP):** Odisha (with German collaboration).
 - **Durgapur Steel Plant (DSP):** West Bengal (with British collaboration).
 - **Bhilai Steel Plant (BSP):** Chhattisgarh (with USSR / Soviet Union collaboration).

Type of Good	Main Identification	Simple Example
Final	Completely ready for consumption or investment (no work left).	Car or bread bought for the home.
Intermediate	As raw material or for resale.	Steel for a factory or wholesale goods for a shop.

Capital	Machines/equipment that help in production for a long time.	A farmer's tractor or a tailor's sewing machine.
Consumer	Fulfills the direct everyday needs of people.	TV, clothes, shoes, food and drink items.

- If you bring milk home to drink, it is a consumer/final good. If the same milk is brought by a tea seller to make and sell tea, it is an intermediate good. And the tea seller's gas stove used for making tea is a capital good.

Industrial Policy Resolution of 1956 (Second IPR):

- It served as the foundational policy for India's Second Five-Year Plan.

P. C. Mahalanobis:

- He is considered the chief architect of Indian planning.
- Statistics Day is celebrated on his birth anniversary, 29 June.
- Established: Indian Statistical Institute, Kolkata.
- He started a journal named 'Sankhya'.

Reforms introduced in Agriculture.

- "Land to the Tiller" Policy:** This was a land reform that gave ownership of land to the farmers who actually worked on it, instead of the landlords (Zamindars).
 - Its objective was to abolish the Zamindari system, reduce rural inequality, and empower farmers.
- Land Ceiling Act (1976):** This was a land reform law in India that set a maximum limit on land ownership to prevent the concentration of land in the hands of a few and to distribute surplus land to landless farmers.
 - High Yielding Variety (HYV) seeds.

9 If the price of a product goes up by 10% and, as a result, the quantity demanded falls by 20%, how would you classify the demand?

- Demand is elastic (elasticity greater than 1) ✓
- Demand is inelastic (elasticity less than 1)
- Demand is unitary elastic (elasticity equals 1)
- Demand is perfectly elastic (elasticity is infinite)

Price Elasticity of Demand

- How much demand changes when there is a change in price.

$$e_d = \frac{\% \text{ change in demand}}{\% \text{ change in price}}$$

EXPLANATION

Type of Elasticity	Value of Elasticity	Main Effect (On price change)	Shape of Graph (Curve)	Example
Perfectly Elastic	$e = \infty$	A slight change in price makes demand infinite.	Horizontal line	-
Relatively Elastic	$e_d > 1$	A small change in price leads to a large change in demand (consumers are sensitive).	Flatter slope	Luxury goods (Gold, cars)

Perfectly Inelastic	$ed = 0$	No matter how much the price changes , the quantity demanded does not change at all (remains constant).	Vertical line	Essential goods (Water, wheat, rice)
Relatively Inelastic	$ed < 1$	Despite a large change in price, there is very little change in demand.	Steep slope	-

Income Elasticity of Demand:

- The income elasticity of demand measures the **relationship between the change in quantity demanded of a particular good and the change in real income**.
- For normal goods:** For most goods, when income increases, demand also increases. The demand curve shifts to the right, showing a positive relationship.
- For inferior goods:** For inferior goods (such as cheap substitutes), when income increases, demand decreases. When income falls, the demand for these goods increases. The demand curve moves in the opposite direction.

Cross-Price Elasticity of Demand:

- Cross-price elasticity of demand is an economic measure of how a change in the price of one good affects the demand for another good.
- Example:** If the price of Pepsi increases by 10% and the demand for Coke increases by 5%.

10 In 2001-02, excise duty structure was rationalized to a single rate of ____ per cent CENVAT (Central Value Add Tax)

(a) 16% ✓

(b) 25%

(c) 8%

(d) 32%

EXPLANATION

Feature	Direct Tax	Indirect Tax
Payment	It is paid directly to the government.	Its payment reaches the government indirectly (through a medium).
Transfer	The tax burden cannot be shifted to another person.	The tax burden can be shifted to another person (final consumer).
Nature	It is progressive; i.e., as income increases, the tax rate also increases.	It is regressive/proportional; i.e., whatever the income, it is applied
Major Examples	Income Tax, Property Tax, Corporate Tax, Gift Tax, Capital Gains Tax.	GST, Excise Duty, Customs Duty, Tax on Petrol/Fuel.

• Surcharge:

- It is an additional tax levied on high-income taxpayers.

• Cess:

- It is a tax levied for a specific purpose.
- It is collected by the Central Government and is not shared with the states.

• Pigouvian Tax:

- It is levied on activities that generate negative externalities.

11

Why are grants for asset creation still considered Revenue Expenditure?

- a) They are spent through government loans
- b) They are used only by private sector units
- c) They do not create direct central assets ✓
- d) They are not included in any budget head

EXPLANATION

Revenue Expenditure Examples

Rupee Comes From

Rupee Goes To

- The current share of **tax devolution from the Union Government** to the States in India is fixed at **41%** of the divisible pool of central taxes.

12

Which of the following is correct regarding Sale of government assets like sale of shares in Public sector unit (PSU)?

- (a) It creates liability for the government
- (b) Amount comes from sale of shares are part of capital receipts ✓
- (c) Amount comes from sale of shares are part of revenue receipts
- (d) It does not reduce the total assets of the government

13

Which of the following represents the 'break-even point' for a firm?

- a) Where marginal revenue equals marginal cost
- b) Where total revenue equals total cost ✓
- c) Where total revenue exceeds total cost
- d) Where marginal cost is minimized

14

Which of the following five year plan of India started in 1969 ?

- (a) First
- (b) Second
- (c) Fourth ✓
- (d) Sixth

EXPLANATION

Fourth Five-Year Plan (1969-1974)

- **Duration:** 1969-1974
- **Model:** Gadgil Formula / Rudra-Allen Model

- **Leadership: Prime Minister:** Indira Gandhi, **President:** V.V. Giri
- **Growth Performance:**
 - **Target** Growth Rate: 5.6%
 - **Actual** Growth Achieved: 3.3% (Failure)
- **Key Focus:** Growth with stability and the move toward self-reliance.
- **Key Initiatives:**
 - Introduction of the Family Planning Programme.
 - Nationalization of 14 major banks (1969).
 - First Underground Nuclear Test conducted, codenamed "Smiling Buddha" (1974).
 - Launch of the Drought Prone Area Programme (1973-1974).

15

Assertion (A): CRR (Cash Reserve Ratio) and SLR requirements increase the lending capacity of banks

Reason (R): These requirements reduce the amount of money banks can lend to the public

- a) Both A and R are true, and R is the correct explanation of A
- b) Both A and R are true, but R is not the correct explanation of A
- c) A is true, but R is false
- d) A is false, but R is true ✓

EXPLANATION

Aspect	Demand Liabilities	Time/Term Liabilities
Withdrawal	Anytime, on demand	Only after maturity
Examples	Savings A/c, Current A/c, Demand Drafts	Fixed Deposits, Recurring Deposits
Liquidity	Highly liquid	Less liquid
Bank's Risk	Higher (must maintain cash reserves)	Lower (predictable outflow)

Reserves Maintained by Banks

- The Reserve Bank of India (RBI) requires banks to keep a portion of their Net Demand and Time Liabilities (NDTL) as reserves. This ensures banks have sufficient cash available to handle emergency situations.

- **This is managed through two primary mechanisms:**

1. Cash Reserve Ratio (CRR) - 4%

- **Where/How it is kept:** Banks must maintain this reserve strictly in cash with the RBI.
- **Returns:** Banks do not earn any interest on the money kept as CRR.

2. Statutory Liquidity Ratio (SLR) - 18%

- **Where/How it is kept:** Banks must maintain this reserve in liquid assets (such as cash, gold, or approved securities).
- **Returns:** Banks earn interest on the money maintained under SLR.

9

John Maynard Keynes, who explained why people hold money instead of investing it. He identified three main motives:

- **Transactions motive** → everyday spending
- **Precautionary motive** → emergencies
- **Speculative motive** → waiting for profitable opportunities

16 Which of the following statements about factors affecting the Money Multiplier (MM) is/are correct?

1. Cash held by individuals acts as a leakage and reduces the money multiplier
2. Higher reserves held by banks with the RBI increase the money multiplier
3. A higher Cash Reserve Ratio (CRR) reduces the banking system's capacity to create money

a) Only 1 and 3 ✓

b) Only 2 and 3

c) Only 1 and 2

d) All 1, 2 and 3 are three

EXPLANATION

Definition: The Money Multiplier is the maximum limit to which the money supply can increase due to changes in bank deposits.

• **Formula:** $\text{Money Multiplier} = \frac{1}{\text{CRR}}$

- **Key Exemption:** Non-Banking Financial Companies (NBFCs) and NBFC-Microfinance Institutions (MFIs) are not required to maintain CRR and SLR, and they can not accept demand deposit.

How CRR affects the Money Multiplier:

- **CRR Increases:** Banks are required to keep more money as reserves.
- **Lending Capacity Drops:** Banks have less money available to lend to the public.
- **Less Money Creation:** Fewer loans being distributed means less new money is created in the economy.
- **Result:** The money multiplier reduces (This process works in reverse if the CRR is decreased).

17 Disinvestment involves selling stakes in?

a) NGOs

b) Private firms

c) Public enterprises ✓

d) Trade unions

18 Abhijit Sen was the chairman of the Committee on the Wholesale Price Index which submitted its report in ____ .

(a) 2004

(b) 2008 ✓

(c) 2010

(d) 2006

EXPLANATION

- **Inflation** is measured using different price indices such as the Consumer Price Index (CPI), Wholesale Price Index (WPI) .

$$\text{Inflation Rate} = \frac{\text{Price Index in Current Year} - \text{Price Index in Previous Year}}{\text{Price Index in Previous Year}} \times 100$$

Wholesale Price Index (WPI)

- Definition:** Measures the average change in prices of goods at the wholesale level (i.e., it reflects price changes before goods reach the consumers).
- Transaction Flow:** Producer → Wholesaler
- Published By:** Office of Economic Advisers (OEA) under the Ministry of Commerce and Industry.
- Base Year:** 2022-23

Formula:

$$\text{WPI} = \frac{\text{Cost of a fixed basket of goods in the current year}}{\text{Cost of fixed basket of goods in base year}} \times 100$$

Consumer Price Index (CPI)

- Definition:** Measures the average change in prices of goods and services at the consumer/retail level. It directly reflects the cost of living for consumers.
- Transaction Flow:** Retailer → Consumer
- Released By:** National Statistical Office (NSO) under the Ministry of Statistics and Programme Implementation (MoSPI).
- Base Year:** 2024

$$\text{CPI} = \frac{\text{Cost of a fixed basket of goods and services in the current year}}{\text{Cost of a fixed basket of goods and services in base year}} \times 100$$

Weightage Distribution in WPI: डब्ल्यूपीआई (WPI) में भारांश वितरण

- Manufactured goods (64.2%)
- Primary articles (22.6%)
- Fuel and power (13.5%)

Weightage Distribution in CPI: सीपीआई (CPI) में भारांश वितरण

- Food and Beverages (highest)
- Housing (10%)
- Fuel and power (6.8%)
- Include services

Four types of CPI

सीपीआई (CPI) के चार प्रकार

- CPI for Industrial Workers (IW)**
औद्योगिक श्रमिकों के लिए सीपीआई (IW)
Industrial Worker Base year: 2016
औद्योगिक श्रमिक आधार वर्ष: 2016
- CPI for Agricultural Labourer (AL)**
कृषि श्रमिकों के लिए सीपीआई (AL)
Base year for CPI-AL and CPI-RI is : 1986-87
CPI-AL and CPI-RL published by Ministry of Labour and Employment
- CPI for Industrial Workers (IW)**
ग्रामीण श्रमिकों के लिए सीपीआई (RL)
CPI-AL और CPI-RL का आधार वर्ष: 1986-87 है।
CPI-AL और CPI-RL श्रम और रोजगार मंत्रालय द्वारा प्रकाशित किए जाते हैं।
- CPI (Rural/Urban/Combined)**
सीपीआई (ग्रामीण/शहरी/संयुक्त)

• Base Year: 2012, published by National Statistical Office (NSO) under MoSPI. .

CPI is used by RBI for its monetary policy.

- The Index of Eight Core Industries (ICI) in India represents **40.27%** of the overall weight of **the Index of Industrial Production (IIP)**.
- These eight industries—coal, crude oil, natural gas, refinery products, fertilizers, steel, cement, and electricity—are considered the backbone of industrial activity

19 Which of the following objectives are part of the National Population Policy (NPP) 2000?

1. Providing free and compulsory education up to 14 years of age
2. Increasing fertility rate to ensure demographic dividend
3. Reducing infant mortality rate below 30 per 1000 live births
4. Promoting delayed marriage for girls

a) Only 1 and 2 are correct

b) Only 1 and 3 are correct

c) Only 1, 3 and 4 are correct ✓

d) 1, 2, 3 and 4 all are correct

EXPLANATION

INDIA'S NATIONAL POPULATION POLICY (NPP) 2000

• Targets include

- Achieving "80% institutional deliveries " and "100% deliveries by trained persons".
- **Maternal Mortality Rate (MMR)**: "reduce to under 100/lakh live birth", by 2010.
- **Total Fertility Rate (TFR)**: "reduce to replacement levels - 2.1 children/woman by 2010".
 - So the population would stabilize by around 2045.

20 In India, the Fiscal Health Index 2025 is based on a comprehensive set of indicators that are grouped into broad categories

(a) 3

(b) 4

(c) 5 ✓

(d) 7

EXPLANATION

Sub-Indices of FHI	
MAJOR SUB-INDICES	MINOR SUB-INDICES
1. Quality of Expenditure	Total Developmental Expenditure/Total Expenditure Total Capital Outlay/ GSDP*
2. Revenue Mobilization	State Own Revenue/ GSDP* State Own Revenue/ Total Expenditure
3. Fiscal Prudence	Gross Fiscal Deficit/GSDP* Revenue Deficit/GSDP*
4. Debt Index	Interest Payments/Revenue Receipts Outstanding Liabilities/ GSDP*
5. Debt Sustainability	Growth Rate of GSDP* - Growth Rate of Interest Payments

*GSDP at current prices for the year 2022-23

Fiscal Health Index (FHI) 2025

Gkbooks.in / Affairshub.in

Top-ranked states

NITI Aayog introduced the Fiscal Health Index (FHI) 2025 on January 24, 2025, in New Delhi.

The FHI evaluates the fiscal performance of 18 Indian states based on revenue, expenditure, and debt management.

The FHI aligns with India's vision of "Viksit Bharat @2047", encouraging states to adopt disciplined fiscal strategies.

The report promotes healthy competition among states to strengthen fiscal management and ensure economic transformation.

NITI AAYOG

- Formed: 1 January 2015
- Headquarters: New Delhi
- Chairperson: Narendra Modi
- Vice Chairperson: Ashok Kumar Lahiri
- CEO: Nidhi Chibber
