★ **CONCEPT + PYQ BASED LEARNING** ★

When does crowding out occur?

- (a) Fiscal expansion lowers interest rates.
- (b) Government borrowing raises interest rates and reduces private investment. ✓
- (c) Tax cuts decrease public spending.
- (d) Government spending reduces private consumption directly.

EXPLANATION

Aspect	Crowding Out	Crowding In
Meaning	Government spending decreases private investment.	Government spending increases private investment.
Cause	Interest rates increase, loans become expensive.	Demand increases, infrastructure improves.
Effect	Private sector steps back.	Private sector steps forward.
Example	Government increases borrowing by selling bonds.	Government invests in roads/electricity.

The 'Yellow Revolution' is associated with an increase in the production of which commodity?

- (a) Turmeric
- (b) Gold
- (c) Pulses
- (d) Oil seeds ✓

EXPLANATION

Revolution	Related Field	Main Product/Focus	Key Point	Father
Green Revolution	Agriculture	Food grains, especially wheat and rice	Increased food grain production	Norman Borlaug (World), M. S. Swaminathan (India)
White Revolution	Dairy	Milk	Increased milk production	Vergheese Kurien
Blue Revolution	Fisheries	Fish	Increased fish production	Dr. Hiralal Chaudhari
Yellow Revolution	Oilseeds	Mustard, groundnut, sunflower etc.	Increased oilseed production	Sam Pitroda
Golden Revolution	Horticulture	Fruits, honey, vegetables, beekeeping	Increased horticulture production	Nirpakh Tutej
Pink Revolution	Meat/Prawn/Onion sector	Meat, prawn, onion	Growth in these sectors	-

3

What is the primary objective of Special Economic Zones (SEZs)?

- (a) To promote agricultural development
- (b) To attract foreign investment and boost exports ✓
- (c) To regulate the stock market
- (d) To manage public sector enterprises

EXPLANATION

- India's first EPZ was established in Kandla (Gujarat) in 1965, which was converted into an SEZ in 2000. An EPZ was also established in Santacruz (Mumbai) in 1972.

SPECIAL ECONOMIC ZONES

AND THEIR ROLE IN EXPORT PROMOTION

Introduced in April 2000 and governed under the Special Economic Zones Act, 2005, Special Economic Zones were established to promote exports of goods and services through duty-free enclaves, simplified procedures and an enabling policy framework.

4

Money that has no intrinsic value but is declared as money by government order is called?

- (a) Commodity Money
- (b) Fiat Money ✓
- (c) Fiduciary Money
- (d) Full-bodied Money

EXPLANATION • Commodity money - Gold, Silver

• Hot Money

- Hot money refers to funds that investors move quickly between countries or financial markets to take advantage of short-term opportunities like stocks, deposits, bonds, etc.

• Fiat currency

- It is a type of currency that is declared legal tender by the government, which means it is authorized by the government to be used as a medium of exchange. It is issued by a central bank and is not backed by any physical commodity like gold or silver.

• Fiduciary money

- Fiduciary money is the money that is accepted as a medium of exchange due to the trust existing between the payer and the payee. This currency runs on 'trust'. Example: Cheques, demand drafts and bills of exchange.

• Plastic money

- Plastic money, also known as electronic money, is a method of payment that uses electronic fund transfers instead of cash. It includes debit cards, credit cards, and prepaid cards.

Primary and Secondary Functions of Money

Primary Functions

- Medium of Exchange
- Measure of Value

Secondary Functions

- Store of Value
- Standard of Deferred Payment
- Transfer of Value

2

5

What does the Laffer Curve in economics suggest?

- (a) Lower taxes always increase government revenue.
- (b) Tax revenue is independent of tax rates.
- (c) Higher taxes always raise government revenue.
- (d) There exists an optimal tax rate that maximises revenue. ✓

EXPLANATION

- The Laffer Curve is a concept in economics that explains how tax rates affect government revenue
- The Laffer curve shows how tax revenues change when the tax rate is either increased or decreased.

Laffer Curve Working Mechanism

- The Laffer Curve demonstrates the relationship between tax rates and government revenue, showing that revenue does not increase indefinitely with higher taxation.
 - **At very low tax rates**, government revenue is minimal because only a small portion of income is collected.
 - **As tax rates rise**, revenue increases since the government collects a larger share of income while economic activity remains robust.
 - However, beyond a certain threshold known as the revenue-maximizing tax rate, further increases in taxation reduce incentives for work, investment, and production. Individuals and businesses may choose to work less, save less, or engage in tax avoidance, leading to a decline in total revenue.
 - At the extreme, a hypothetical 100% tax rate would yield zero revenue, as there would be no incentive to earn taxable income.

6

According to the 2011 Census, which is the second most spoken language in India after Hindi?

- (a) Marathi
- (b) Telugu
- (c) Tamil
- (d) Bengali ✓

EXPLANATION

3

7

As per the 2011 Census, which Indian state has the highest percentage of Christian population?

(a) Kerala

(c) Nagaland ✓

(b) Goa

(d) Manipur

EXPLANATION

Largest Religion Other Than Hinduism and Islam

CENSUS 2011: RELIGIOUS PROFILE

India's population data based on religion, which was part of Census 2011, was released by the government on Tuesday

	Population in 2011 (cr)	Proportion of population in %	Decadal change in proportion in % pts
Hindu	96.63	79.8	-0.7
Muslim	17.22	14.2	+0.8
Christian	2.78	2.3	No change
Sikh	2.08	1.7	-0.2
Buddhist	0.84	0.7	-0.1
Jain	0.45	0.4	No change
Others	0.79	0.7	-
Religion not stated	0.29	0.2	-

- The highest **Christian** percentage is in **Nagaland (88%)**. (Others: Mizoram 87%, Meghalaya 75%).
- During 2001-2011, the population growth rate of **Nagaland** was **negative (-0.58%)**.

8

Which of the following correctly represents the evolution of Basel Norms related to banking regulation?

a) Basel I - Credit risk only; Basel II - Credit + Market risk; Basel III - Capital adequacy + Liquidity norms

b) Basel I - Capital adequacy norms; Basel II - Three pillars (risk management, supervision, market discipline); Basel III - Stronger capital + liquidity norms ✓

c) Basel I - Liquidity norms; Basel II - Agricultural credit; Basel III - Trade finance

d) Basel I - Market discipline; Basel II - Only liquidity; Basel III - Only credit risk

EXPLANATION

$$\text{Capital Adequacy Ratio (CAR)} = \frac{\text{Tier 1} + \text{Tier 2}}{\text{Risk-Weighted Assets (RWA)}} \times 100$$

- Tier 1 Capital:** Core capital. It is the primary and most secure capital of the bank (such as shareholders' equity and disclosed reserves), by which the bank can absorb losses without stopping its operations.
- Tier 2 Capital:** Supplementary capital. It is the secondary capital of the bank (such as undisclosed reserves and hybrid capital instruments), which is less secure compared to Tier 1.

4

BASEL NORMS

- Basel Norms, also known as **Basel Accords**, are a set of international banking regulations aimed at strengthening the banking system and managing risk.
- Establishment:** In **1974** by Central Bank Governors (Group of 10 countries)
- Headquarters:** Office of **BIS (Bureau of International Settlement)**, Basel, Switzerland
- The **Basel Committee on Banking Supervision (BCBS)** has issued three sets of regulations, known as **Basel-I, II and III**.

• Basel-I (1988)

- **Main Focus:** Only on credit risk.
- **Minimum Capital:** 8% of Risk-Weighted Assets (RWA).
- **In India:** Implemented in 1999.

• Basel-II (2004)

- **Main Focus:** Measuring assets based on their distinct risk profiles (RWA).

• Basel-III (2010)

- **Total Capital Adequacy Ratio (CAR):** Generally cited as 10.5% or 11.5%, depending on the jurisdiction and included buffers. While some sources mention 12.9% as a mandated level.
- **Minimum Tier-1 Capital:** 10.5% of RWA.
- **Minimum Tier-2 Capital:** 2% of RWA.

9

Positive Economics and Normative Economics differ on what basis?

a) Facts vs Value judgments ✓

b) Demand vs Supply

c) Production vs Consumption

d) Micro vs Macro

EXPLANATION

NORMATIVE

VS

POSITIVE ECONOMICS

Normative Economics	Positive Economics
It is based on opinion and value of the interpreter	It is based on actual data, facts, and numbers
Verification is not possible	Results can be verified
No way to test feasibility and applicability in various fields	Safe and beyond doubt and can be proved scientifically
It deals with idealistic situations	It deals with actual and realistic situations
<i>Example:</i> The level of unemployment must be 5% maximum	<i>Example:</i> The current unemployment rate is 20%

Parallel Economy

- Parallel economy refers to all types of activities through which black money is generated and which are generally not accounted for.
- It makes government policies ineffective.

FATF (Financial Action Task Force)

- It is an international organization that sets global standards for the prevention of **money laundering, terrorist financing, and the proliferation of weapons**.
- India has been a member of the FATF since 2010 and has strengthened its financial framework according to its rules.
- Establishment:** In **1989** at the **G7 Summit (Paris)**.
- Headquarters:** Paris, France.

G7 = America + Britain + Canada + France + Germany + Italy + Japan

10

What happens when there is a rise in the repo rate by the Reserve Bank of India?

- Increase investment and consumption.
- Increase inflation immediately.
- Reduce money supply and investment. ✓
- Have no effect on the economy

EXPLANATION

Difference between Repo Rate and Reverse repo Rate

Repo Rate

It is Rate of Interest Charged By Central Bank From Commercial banks

It is applicable on Loan taken By Commercial Banks From Central banks

Reverse Repo Rate

It is Rate of Interest Paid by Central Bank To Commercial banks

It is applicable on Deposits made by Commercial Banks with Central banks

Both Repo Rate and Reverse Repo Determined by Central Bank (RBI) And not Commercial bank.

11

A situation with a very high rate of inflation, where money loses its value very quickly, is called?

(a) Deflation

(c) Stagflation

(b) Disinflation

(d) Hyperinflation ✓

EXPLANATION

Disinflation

- The decrease in the rate of inflation, while prices may still be rising. It is measured by the change in the inflation rate from one year to the next.
- Cause:** A slowdown in the economy's money supply through a tighter monetary policy.

Deflation

- It is a general decrease in the price of goods and services. In deflation, purchasing power increases.
- Cause:** Reduced money supply, reduced investment, or lower production.

Phillips Curve

- It is a graph that shows the relationship between unemployment and inflation in an economy.
- Inflation and Unemployment have inverse relationship
 - High inflation = Low Unemployment**
 - Low inflation = High Unemployment**

Stagflation

- It is a period of high inflation and low economic growth. It's a combination of the words "stagnation" and "inflation" (**Stagflation = Stagnation + Inflation**).
- When stagflation increases, high unemployment is a direct consequence.
- Cause:** When the production of goods and services in an economy slows down or declines.

Shrinknflation

- Shrinknflation occurs when companies reduce a product's size or quantity while keeping the retail price exactly the same.
- It is a **"stealth"** tactic used to hide rising production costs without scaring shoppers off with an obvious price hike.
- You'll often see this in the grocery aisle, like cereal boxes getting thinner or snack bags containing more air than chips.
- Ultimately, it means you are paying the same amount for less value, making it a frustratingly hidden form of inflation.

7

Bottleneck inflation

- Bottleneck inflation occurs when a **sudden surge in demand hits supply chain "choke points,"** such as shipping delays, labor shortages, or a lack of raw materials.
- These disruptions prevent goods from reaching the market efficiently, causing prices to spike because the limited supply cannot keep up with consumer appetite.
- Think of it as an economic traffic jam: even when everyone is ready to spend, a "narrow road" in production or logistics forces the whole system to a costly crawl.

Skewflation

- Skewflation occurs when there is a **sharp price increase in one or two specific sectors** (like food or energy) while prices in other areas remain stable or even decrease.
- The term comes from "skewed" inflation, meaning the price rise is not uniform across the whole economy but is concentrated in a few essential goods.
- This often happens due to sudden supply shocks in specific industries, making the overall inflation average look misleadingly low while consumers feel the pinch in daily essentials.

12

Which of the following statement is **INCORRECT** regarding Foreign exchange rate?

- (A) It is the price of one currency in terms of another
- (B) It enables comparison of international costs and prices
- (C) People demand foreign exchange because they want to purchase goods and services from other countries
- (D) A rise in the price of foreign exchange decreases the cost of purchasing a foreign good ✓

13

Which of the following best describes the key requirement for ensuring balanced regional development (BRD) across India?

- (a) Dependence on financial resources without other factors.
- (b) Focusing solely on technology and infrastructure.
- (c) A mix of financial, natural, human, and technological resources. ✓
- (d) Relying on centralized planning and governance.

14

Which of the following is a direct result of unsustainable development?

- (a) Reduced global consumption
- (b) Enhanced resource regeneration
- (c) Environmental crisis and depletion of resources ✓
- (d) Sustainable management of natural resources

15 What is measured by the Lorenz Curve?

- (a) Price elasticity (b) Economic growth
(c) Income inequality (d) Unemployment

EXPLANATION

Lorenz Curve

- A Lorenz curve is a graph that shows how income or wealth is distributed within a population. It is used to measure inequality and to compare the distribution of income and wealth across different age groups.

Gini Coefficient

0 → 1

0: Perfect equality

1: Perfect inequality

- Gini Coefficient or Gini Ratio can associated with measurement of **income inequality** in an economy.

16 Q. Which of the following is a method used to calculate National Income?

- (a) Income Method (b) Expenditure Method
(c) Production Method (d) All of the above

17 As per the 2011 Census, a person is classified as a 'Main Worker' if they have worked for how many days in the preceding year?

- (a) For 183 days or more (b) For 120 days
(c) For less than 183 days (d) For at least 100 days

EXPLANATION

Marginal Worker

Main Worker

Marginal Worker	Main Worker
Marginal worker is someone who is employed for less than 6 months or 183 days	Main worker is someone who is employed for more than 6 months or 183 days
E.g. Landless agricultural laborers and people who work in low-wage industries	E.g. Construction workers, seasonal employees, independent contractors

Organised Sector	Unorganised Sector
This sector is registered under government. In such way, working hours, working conditions, social security, etc. is all regulated by the government.	This sector is outside the control of government.
The terms of employment is regular	The terms of employment is not regular
There is security of employment E.g. Fixed working hours, leaves, etc.	There is no security of employment

18 Which of the following is not part of fiscal policy?

(a) Tax rates

(b) Open market operations ✓

(c) Subsidies

(d) Government spending

EXPLANATION

FISCAL POLICY

- Fiscal policy is the **government's strategy** to manage the economy by adjusting taxes, government spending, and borrowing. It is used to control inflation or deflation, unemployment, and economic growth.
- When the government wants to control inflation, it can take the following steps:

- Increased Taxes:** Higher taxes reduce people's disposable income, leading to lower spending and demand.
- Lower Subsidies:** Reducing subsidies makes goods and services more expensive, discouraging excessive consumption.
- Lower MSP (Minimum Support Price):** A lower MSP discourages excessive crop production and controls the rise in food prices by keeping supply in check.

MSP stands for Minimum Support Price, a price set by the government for certain agricultural products.

19 Why was VAT (2005) introduced by states?

(a) Enhance custom duties.

(b) Increase central revenue.

(c) Remove cascading effects of sales tax. ✓

(d) Promote imports.

EXPLANATION

- Value Added Tax (VAT)** was introduced by Indian states in **2005** to replace the earlier sales tax regime and eliminate cascading effects, where tax was levied on tax.

- VAT ensures transparency by taxing the value addition at each stage of production or distribution of goods.
- It was **aimed** at simplifying the indirect tax system and ensuring uniformity across states, thereby reducing tax evasion and promoting compliance.

- Minimum Alternate Tax (MAT)** ensures every company pays a minimum tax based on book profits, even if normal tax liability is low. With the 2026 reforms, MAT is now leaner (14%) but stricter, pushing businesses toward India's concessional corporate tax regime.

The **Raja Chelliah Committee (1991-93)**, formally called the Tax Reforms Committee, was India's landmark panel on tax reform

20 Which of the following correctly matches currency changes with their nature?

- a) Depreciation - Market driven; Devaluation - Government action ✓
- b) Appreciation - Government action; Revaluation - Market driven
- c) Depreciation - Government action; Appreciation - Government action
- d) Devaluation - Market driven; Revaluation - Market driven

EXPLANATION

Depreciation

- A decrease in the value of the domestic currency due to market forces (supply and demand in the forex market).
- Exporters will benefit in case of depreciation.

Appreciation

- An increase in the value of the domestic currency due to market forces.
- This happens when the demand for the domestic currency rises.

Both **Depreciation and Appreciation** occur due to **Floating Exchange Rate system** (price of country's currency is determined by the market based on supply and demand).

Devaluation

- A government induced depreciation of the domestic currency under a fixed exchange rate system.
- Devaluation of currency will be more beneficial if prices of exports rise proportionately.

Revaluation

- A government induced appreciation of the domestic currency under a fixed exchange rate system.

- NEER (Nominal Effective Exchange Rate)** tells you how your currency is moving against others, while **REER (Real Effective Exchange Rate)** tells you whether your goods and services are becoming more or less competitive internationally.

21

Which of the following is considered as Monetary Aggregate?

a) M0

b) M1

c) M2

d) M3 ✓

EXPLANATION

• Currency in Circulation (CU) = Currency with Public + Currency with Banks

- The total physical money circulating in the entire economy is calculated by adding the cash held by everyday people (the public) to the cash currently stored inside bank vaults.

• Deposits with RBI = Bank Deposits + Other Deposits

- The total deposits maintained at the Reserve Bank of India (RBI) are a combination of the money deposited by commercial banks and 'other' deposits (which typically include deposits from financial institutions or foreign entities).

• Currency Deposit Ratio (CDR) = Money held by public (cash) / Bank Deposits

- During festival time people's banking habit is low/decrease that's why CDR is increase/high.

MEASURES OF MONEY SUPPLY (MONETARY AGGREGATES)

- The Reserve Bank of India (RBI) uses specific metrics called Monetary Aggregates to measure the total amount of money circulating in the economy at a given point in time. Understanding these aggregates (M1, M2, M3, M4) helps the RBI formulate Monetary Policy.

1. High-Powered Money (M0)/ Reserve Money, Monetary Base, or Base Money.

- $M0 = \text{Currency in Circulation} + \text{Banker's deposit with RBI} + \text{Other Deposits with RBI}$

2. M1 (Narrow Money)

- $M1 = \text{Currency with public} + \text{Other Deposits with RBI} + \text{Demand Deposits}$

3. M2

- $M2 = M1 + \text{Saving Deposits with Post Office Savings Bank}$

4. M3 (Broad Money / Aggregate Monetary Resource)

- $M3 = M1 + \text{Net Time Deposits (Term Deposits) with commercial banks}$

5. M4

- $M4 = M3 + \text{Total Deposits with Post Office}$

22

Value of Marginal Propensity to consume lies between ?

a) 0-1 ✓

b) 0-10

c) 1-10

d) 0-100

EXPLANATION

Marginal Propensity to Consume (MPC)

$$MPC = \frac{\Delta C}{\Delta Y}$$

12

$0 \leq MPC \leq 1$

- $MPC = 0 \rightarrow$ All extra income is saved.
- $MPC = 1 \rightarrow$ All extra income is consumed.
- Typically, MPC lies between 0 and 1.

MPC (Marginal Propensity to Consume) + MPS (Marginal Propensity to Save) = 1

Government Expenditure Multiplier

$$\text{Multiplier}(K) = \frac{1}{1 - C(MPC)}$$

Consumption Function

$$C = \bar{A} + cY$$

- C = Total consumption
- $\bar{A}$ = Autonomous consumption (spending that happens even if income is zero, financed by savings or borrowing, Income Independent)
- cY = Induced consumption (spending that rises with income, determined by the marginal propensity to consume c , Income Dependent)

23 What was the goal of 12th Five Year Plan?

- (a) Rapid and More Inclusive Growth
- (b) Rapid Inclusive and Sustainable Growth ✓
- (c) Rapid Industrialisation
- (d) Growth with Stability

EXPLANATION

- **Forex Reserves (Foreign Exchange Reserves)** are the stock of foreign currency assets held by a country's central bank (in India, the Reserve Bank of India). They act as a financial buffer and a tool for stabilizing the economy.
- Components of Forex Reserves
 - **Foreign Currency Assets (FCA)** - Holdings of major currencies like US dollars, euros, pounds, yen.
 - **Gold Reserves** - Physical gold held by the central bank.
 - **Special Drawing Rights (SDRs)** - International reserve assets created by the IMF, valued against a basket of five major currencies (USD, EUR, CNY, JPY, GBP).
 - **Reserve Position in the IMF** - India's claim on the IMF, which can be quickly converted into foreign currency.
- The International Monetary Fund (IMF) and the World Bank (initially the International Bank for Reconstruction and Development, IBRD) were created at the **Bretton Woods Conference in July 1944.**
 - The **Washington Consensus** refers to a set of ten economic policy prescriptions, coined in 1989 by economist **John Williamson.**

Feature	Nostro Account	Vostro Account
Language root	"Ours"	"Yours"
Who holds it	Domestic bank in foreign bank	Foreign bank in domestic bank
Currency	Foreign currency	Domestic currency
Example	SBI's USD account in Citibank (NY)	Citibank's INR account in SBI (India)
