

How not to worry

Before changing worry into peaceful and **cheerful state of mind**, the process needs to be understood in a proper **perspective**. Worry is a process of imagining the worst-possible outcome, result or future in a particular situation.

Worry is also an imaginative way of creating a living and active image of the worst possibility in your **consciousness**. Then using energy of that negative image to flow inside your consciousness, to weaken your spiritual self and, as a result, your physical self, too, **leading to** creating a sense of fear or **anxiety**.

It's important to realise that by worrying, we prepare for the worst in the future. Instead of **empowering** the mind and **intellect**, worry weakens them. Preparing for future is important and necessary, but we start worrying that leaves us **depleted** or weakened. There is **a fine line of demarcation** between necessary preparation in advance on the one hand, and worrying on the other. The **preparation can** always be done without creating an excessive number of imaginary negative outcomes or results in the mind.

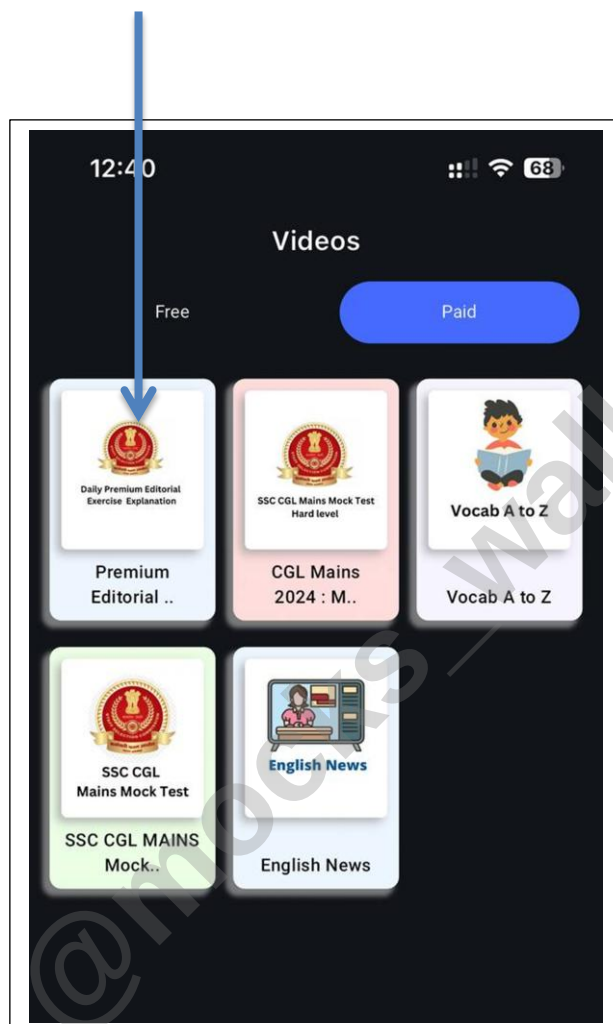

For that, our **innate capacity** to think positive, and to **discriminate** right from wrong, **needs** to be developed through **constant contemplation** of spiritual **wisdom** and regular practice of Rajyog meditation for staying in a state of happiness and **mindfulness**.

- Red/blue coloring of words in the sentence indicates subject verb relationship; where 'red' denotes 'subject' and 'blue' denotes 'verb'.

Vocabulary

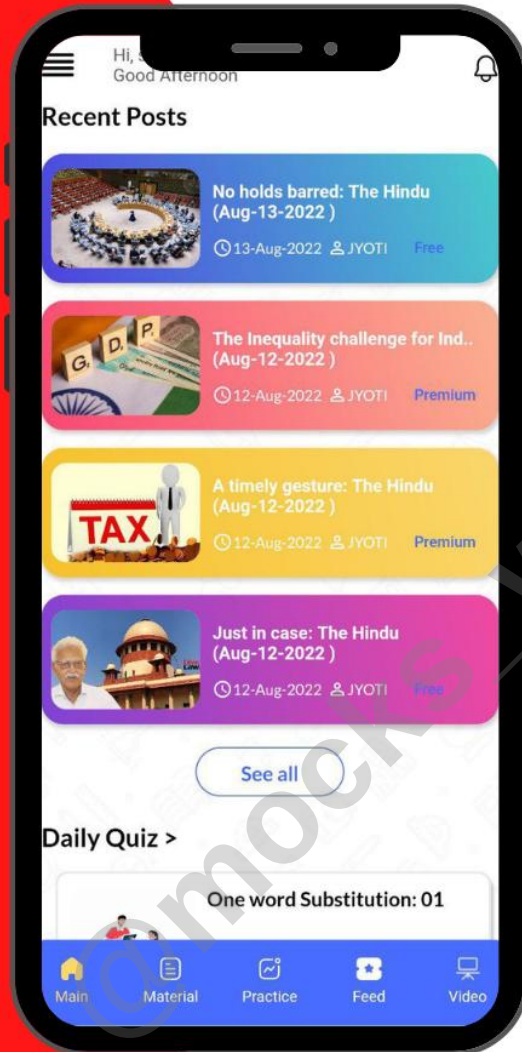

1. **Cheerful** (adjective) – happy, joyful, bright, optimistic, jolly खुशमिजाज
