

Why science alone cannot make us happy

We all dream of a better world where there is peace, happiness, and **harmony**. However, when we look at the present world **scenario**, we **come to the conclusion** that certain things have gone wrong, and we feel that something is definitely **amiss**. We **infer** that **lapses** on our part **have led to** our present **state** of increasing **mess**.

It is either our **ignorance** of the principles of happy living that holds us away from our **cherished** goals, or **wilful** violation of certain basic laws of life and living in a society has led us into this **sorry state of affairs**. Otherwise, how would we explain why we are sinking ever deeper into the **marshland** of poverty and pollution, or into the **morass** of corruption and crime? In spite of achieving the highest-ever level of scientific and technological development, a significant percentage of our people are still living in a state of **trauma**, tension, **turmoil**, poverty, **squalor**, and disease. Our managerial skills have become so sophisticated that we can run mega-industries and multinational corporations, yet we are unable to manage ourselves; as a result, our families and society continuously struggle for existence. We have achieved a great fund of knowledge and learnt methods of human resource development, yet there is a **steep** downfall in civil life and **deterioration** in human relations, leaving only make — believe love and **showy co-operation** with expectations of return.

In short, there is increasing environmental deterioration, economic **stagnation** in advanced countries, unemployment, inflation, and **misery** in less-developed countries, hunger and **malnutrition** in many parts of the world, and urban deterioration and crime rise everywhere. Do these not **point to** either our ignorance of basic laws of happy living or actions that **contradict essential** principles of life? It should not be difficult to understand that certain laws **govern** our **mutual** relationships and human behaviour. These are known as moral laws or **ethical** principles. Based on these are norms, **codes of conduct**, or rules and regulations to be followed in an organised society. If we follow these laws, **the quality and quantity** of happiness in our life **is enhanced**; if we **violate** them, we face many problems and disturbances. **Observance** of moral norms **is** of great value if we wish to be happy and build a society free from **friction** in human relations and tensions in day-to-day life. These are therefore called values. Our present sorry state is the result of neglect or violation of those values. We have **gradually** lost the human **aspect** of our life and become more or less like machines; as a result, there is no spirit of friendship, fellow-feeling, and love in our life. In other words, there has been **rapid erosion** of social, moral, and family values. It is not that science, technology, or management skills have caused our present sufferings; **on the contrary**, it is the fall in moral standards that prevents even science, technology, and management or administrative ability from giving their full **fruits**.

Moreover, it is not that people do not know moral values are necessary to build a happy and peaceful society. People wish to have moral qualities but lack **spiritual** knowledge that enables them to follow these values successfully, nor do they know the kind of **meditation** that helps **retain** these values and gives **deep** experience of peace and happiness. Thus, **the need of the hour** is to create mass awareness of values like tolerance and mutual respect **in order to** realise our dream of a world with peace and harmony.

Summary of the Editorial

1. Humanity aspires for peace, happiness, and harmony, but the current world scenario reflects disorder and dissatisfaction.
2. Ignorance of the principles of happy living or deliberate violation of life's basic laws has contributed to this state.
3. Despite technological progress, societies continue to face poverty, pollution, corruption, and crime.
4. Scientific and managerial skills allow us to run mega-industries, yet we fail to manage ourselves and our relationships.
5. Families and societies struggle due to lack of self-management and harmony in daily living.
6. Knowledge and human resource development have grown, but civil life and human relations have deteriorated.
7. Love, cooperation, and kindness are often reduced to superficial displays motivated by self-interest.
8. The world is marked by environmental decline, economic stagnation in developed countries, and unemployment and misery in less-developed regions.
9. Hunger, malnutrition, urban decay, and rising crime reflect deeper violations of life's moral principles.
10. Moral laws or ethical principles are essential for happy and peaceful coexistence in society.
11. Observing values like honesty, tolerance, and cooperation enhances happiness; neglecting them leads to turmoil.
12. The present crisis stems from erosion of social, moral, and family values, not from science or technology itself.
13. Science and technology cannot yield their full benefits without a strong moral foundation.
14. People recognize the importance of moral values but lack spiritual knowledge and practices, like meditation, to sustain them.
15. The urgent need is to spread awareness of values such as tolerance, mutual respect, and spiritual living to achieve a peaceful, harmonious world.
